STIC-Biotech/ChemLib

199050

From: Li, Ruixiang  
Sent: Monday, June 05, 2006 3:22 PM  
To: STIC-Biotech/ChemLib  
Subject: Sequence search of Application No.10/600,816

Please do a standard search on:

- (i). SEQ ID NO: 3 against amino acid databases;
- (ii). SEQ ID NOS: 2 and 30-33 against nucleic acid databases.

Thank you very much!

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT New isolated antigenic peptides e.g., for G protein-coupled receptors

PT (GPCR), useful for diagnosing and designing drugs for treating conditions

PT in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or  
PT autoimmune diseases.

PS Disclosure; Fig 1; 523pp; English.

XX  
XX  
CC The present invention describes antigenic peptides (I) comprising: (a)  
CC any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino  
CC acids. Also described: (1) an assay for the detection of a particular G  
CC protein-coupled receptor (GPCR) or a candidate polypeptide in a sample;  
CC and (2) an isolated antibody having high specificity and high affinity or  
CC avidity for a particular GPCR. (I) can be used as GPCR modulators and in  
CC gene therapy. The antigenic peptides for GPCRs are useful in detecting an  
CC antibody against a particular GPCR, and in the production of specific  
CC antibodies. The peptides and antibodies are also useful for detecting the  
CC presence or absence of corresponding GPCRs. The antigenic peptides for  
CC GPCRs and antibodies are useful for diagnosing and designing drugs for  
CC treating immune-related diseases, growth-related diseases, cell  
CC regeneration-related diseases, immunological-related cell proliferative  
CC diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease,  
CC atherosclerosis, bacterial, fungal, protozoan or viral infections,  
CC osteoarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute  
CC inflammation, allergies, Crohn's disease, diabetes, graft versus host  
CC disease, Parkinson's disease, multiple sclerosis, pain, psoriasis,  
CC anxiety, depression, schizophrenia, dementia, mental retardation, memory  
CC loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension,  
CC hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or  
CC any other disorder in which GPCRs are involved. The antibodies may be  
CC used in immunoassays and immunodiagnosis. AB242523 to AB242869 encode  
CC GPCR proteins given in ABP81675 to ABP82018, which are used in the  
CC exemplification of the present invention

XX
XX      New nucleic acid molecule encoding a human G-protein coupled receptor,
XX      RAI3, useful for preventing, treating or ameliorating chronic obstructive
XX      pulmonary disease (COPD), COPD-like disorder, or the underlying symptoms
XX      of COPD.
XX
XX      Claim 1; SEQ ID NO 2; 301pp; English.
XX
XX      The present sequence is that of cDNA encoding a human G-protein coupled
XX      receptor (Class C, Group 5), denoted retinoic acid induced 3 (RAI-3).
XX      Proteomics methods were used to isolate cigarette smoke-inducible
XX      tyrosine phosphorylated proteins from airway epithelial cells. RAI-3 was
XX      identified as being tyrosine phosphorylated and/or as being
XX      associated/complexed with tyrosine phosphorylated proteins only in those
XX      cells that had been exposed to cigarette smoke. Since RAI-3 is primarily
XX      expressed in lung tissue, and since cigarette smoke is a major causative
XX      factor of chronic obstructive pulmonary disease (COPD), RAI-3 provides a
XX      novel cellular target for identifying modulators, e.g. agonists or
XX      antagonists, useful for the treatment and/or prevention of COPD and
XX      related disorders such as emphysema and chronic bronchitis. RAI-3
XX      modulators, e.g. agonists and antagonists, especially antisense
XX      compounds, can be used to treat COPD and other disorders and diseases
XX      associated with regulation of NF-kB and/or its associated or interacting
XX      signaling molecules. Single nucleotide polymorphisms (SNPs) detected in
XX      the RAI-3 gene are useful for determining COPD association in
XX      individuals. RAI-3 nucleic acid molecules and polypeptides are useful for
XX      preventing, treating or ameliorating disorders related to aberrant GPCR
XX      signaling or cell cycle regulation, pulmonary disorders, inflammatory
XX      lung disorders, COPD, the underlying symptoms of COPD, COPD-related
XX      disorders or conditions, autoimmune disorders, disorders related to
XX      hyperimmune activity, inflammatory conditions, disorders related to
XX      aberrant acute phase responses, hypercongenital conditions, birth
XX      defects, necrotic lesions, wounds, organ transplant rejection, renal
XX      diseases, ischaemia-reperfusion injury, heart disorders, disorders
XX      related to aberrant signal transduction, proliferation disorders,
XX      cancers, HIV infection, asthma, cystic fibrosis, pulmonary fibrosis,
XX      ulcerative colitis, cerebral infarct, myocardial infarct, diabetic
XX      nephropathy, allergic rhinitis, Crohn's disease, atherosclerosis,
XX      rheumatoid arthritis, inflammatory/autoimmune disorders, glioblastoma,
XX      pulmonary small cell undifferentiated carcinoma, carcinoma of the breast,
XX      colon, lung, ovary, pancreas, prostate, non-Hodgkin's lymphoma, disorders
XX      associated with aberrant cell adhesion, I-CAM function and/or regulation,
XX      B-selectin function and/or regulation, or aberrant NF-kB function and/or
XX      regulation (all claimed).

PT Detecting pancreatic cancer-associated transcript in a biological sample,  
PT useful for diagnosing or treating the disease, comprises contacting the  
PT sample with a polynucleotide that selectively hybridizes to a specific  
PT sequence.

XX PS Claim 7; SEQ ID NO 9; 263pp; English.

XX CC The present invention describes a method for detecting a pancreatic  
CC cancer-associated transcript in a biological sample. The method comprises  
CC contacting the biological sample with a polynucleotide that selectively  
CC hybridizes to a sequence at least 80% identical to a sequence as shown in  
CC any one of Tables 3 to 25 in the specification or having the GenBank  
CC Accession Number AF29145. Also described: (1) diagnosing pancreatic  
CC cancer in a human or animal subject being tested, determining the  
CC likelihood that a subject having a pancreatic cancer will survive, or  
CC determining the suitability of a subject having a pancreatic cancer for  
CC surgical resection therapy; (2) detecting a pancreatic cancer-associated  
CC polypeptide in a biological sample; (3) determining the likelihood that a  
CC subject having a pancreatic cancer will survive; and (4) monitoring the  
CC efficacy of a therapeutic treatment of pancreatic cancer. A pancreatic  
CC cancer-associated transcript has cytostatic activity, and can be used in  
CC gene and protein therapy. A pancreatic cancer-associated transcript

CC polynucleotide, a vector comprising the polynucleotide, an isolated  
CC polypeptide or an antibody that binds to the isolated polypeptide can be  
CC used for diagnosing or prognosing pancreatic cancer or for preparing a  
CC medicament for the treatment of pancreatic cancer. The prognostic or  
CC diagnostic methods are useful for the early detection of pancreatic  
CC cancer or its metastases, and for monitoring the progress of disease such  
CC as during remission or following surgery or chemotherapy. The present  
CC sequence encodes human retinoic acid induced 3 (RAI3), which is used in  
CC the exemplification of the present invention.

XX New tumor-associated antigenic target polypeptides and nucleic acids, useful in preparing a medicament for treating or detecting a proliferative disorder, e.g. breast, lung, colorectal, ovarian or

prostate cancer or tumor.

Claim 1; SEQ ID NO 3498; 7273pp; English.

The invention relates to human tumour-associated, antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide sequences at least 80% identical to the TAT nucleic acids and polypeptides; expression vectors and host cells comprising a TAT nucleic acid; an antibody specific for a TAT polypeptide; a peptide or organic molecule which binds to a TAT polypeptide; fusion proteins comprising a TAT polypeptide; and methods and compositions for the treatment or diagnosis of cancer in mammals. TAT polypeptides, nucleic acids, antibodies, antagonists, binding molecules and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder cancer, pancreatic cancer, cervical cancer, cancers of the central nervous system, melanoma and leukaemia. TAT nucleic acids may further be used as hybridisation probes, in chromosome and gene mapping, in chromosome identification and in gene therapy. The present sequence represents a TAT nucleic acid of the invention.

XX Novel isolated antibody e.g. anti-E16 or anti-TAT112 antibody that binds  
PT to tumor-associated antigenic target polypeptide, useful for diagnosing  
PT or treating cancer.  
XX Claim 1; SEQ ID NO 40; 96pp; English.  
XX This invention relates to a novel isolated antibody, for example anti-E16  
or anti-TAT112 antibody, that binds to a tumor-associated antigenic  
CC target polypeptide (TAT) and that lacks an associated signal peptide  
CC sequence. The invention may be useful for the development of compounds  
CC with a cytostatic activity acting as antagonists of the TAT118  
CC polypeptide or RNA interference whilst the disclosed sequences may be  
CC useful for gene therapy. The invention is useful for inducing the death  
CC of a cell (such as a cancer cell chosen from breast, colon, rectum,  
CC endometrium, kidney, lung, ovary, skin and liver) to which it binds,  
CC inhibiting proliferation or promoting cell death of a cell expressing  
CC TAT118. In addition, the invention may be useful for detecting the level  
CC of TAT118 polypeptide in a test cell relative to a control cell, or  
CC treating or preventing a cell proliferative disorder associated with  
CC increased expression of TAT118. The novel antibody of the invention is  
CC useful for inhibiting the growth of a cancer cell and may be useful for  
CC diagnosing or treating cancer. The present sequence is that of the human  
CC TAT115 cDNA which encodes a protein against which an antibody of the  
CC invention may be targeted.

XX
XX Substante that suppresses expression of retinoic acid-inducible G-protein
PT coupled receptor-3 RA13 gene or nucleic acid, useful for suppressing cell
PT growth, and as pharmaceutical or therapeutic agent of breast cancer.
XX
XX Claim 1; SEQ ID NO 2; 22pp; Japanese.
PS
XX The invention relates to a novel substance which suppresses the
CC expression of a retinoic acid-inducible G-protein coupled receptor (RA1)3
CC gene. The RA13 gene suppressing agent is useful for suppressing cell
CC growth, and as a pharmaceutical or therapeutic agent of breast cancer.
CC and is also useful in identifying a cell growth inhibitory substance. The
CC RA13 gene suppressing agent enables the identification of a cell growth
CC inhibitory substance. This polynucleotide sequence represents the
CC retinoic acid-inducible G-protein coupled receptor 3 gene of the
CC invention.

XX
XX New nucleic acid molecule encoding a human G-protein coupled receptor,
XX RAI3, useful for preventing, treating or ameliorating chronic obstructive
XX pulmonary disease (COPD), COPD-like disorder, or the underlying symptoms
XX of COPD.
XX
XX Claim 21; SEQ ID NO 18; 301pp; English.
XX
XX The present sequence is that of cDNA encoding a human G-protein coupled
XX receptor (Class C, Group 5), denoted retinoic acid induced 3 (RAI-3).
XX Proteomics methods were used to isolate cigarette smoke-inducible

```

```

CC tyrosine phosphorylated proteins from airway epithelial cells. RAI-3 was
CC identified as being tyrosine phosphorylated and/or as being
CC associated/complexed with tyrosine phosphorylated proteins only in those
CC cells that had been exposed to cigarette smoke. Since RAI-3 is primarily
CC expressed in lung tissue, and since cigarette smoke is a major causative
CC factor of chronic obstructive pulmonary disease (COPD), RAI-3 provides a
CC novel cellular target for identifying modulators, e.g. agonists or
CC antagonists, useful for the treatment and/or prevention of COPD and
CC related disorders such as emphysema and chronic bronchitis. RAI-3
CC modulators, e.g. agonists and antagonists, especially antiseense
CC compounds, can be used to treat COPD and other disorders and diseases
CC associated with regulation of NF-kB and/or its associated or interacting
CC signaling molecules. Single nucleotide polymorphisms (SNPs) detected in
CC the RAI-3 gene are useful for determining COPD association in
CC individuals. RAI-3 nucleic acid molecules and polypeptides are useful for
CC preventing, treating or ameliorating disorders related to aberrant GPCR
CC signaling or cell cycle regulation, pulmonary disorders, inflammatory
CC lung disorders, COPD, the underlying symptoms of COPD, COPD-related
CC disorders or conditions, autoimmune disorders, disorders related to
CC hyperimmune activity, inflammatory conditions, disorders related to
CC aberrant acute phase responses, hypercongenital conditions, birth
CC defects, necrotic lesions, wounds, organ transplant rejection, renal
CC diseases, ischaemia-reperfusion injury, heart disorders, disorders
CC related to aberrant signal transduction, proliferation disorders,
CC cancers, HIV infection, asthma, cystic fibrosis, pulmonary fibrosis,
CC ulcerative colitis, cerebral infarct, myocardial infarct, diabetic
CC nephropathy, allergic rhinitis, Crohn's disease, atherosclerosis,
CC rheumatoid arthritis, inflammatory/autoimmune disorders, glioblastoma,
CC pulmonary small cell undifferentiated carcinoma, carcinoma of the breast,
CC colon, lung, ovary, pancreas, prostate, non-Hodgkin's lymphoma, disorders
CC associated with aberrant cell adhesion, I-CAM function and/or regulation,
CC E-selectin function and/or regulation, or aberrant NF-kB function and/or
CC regulation (all claimed).

PS					
CC	The invention relates to an isolated polypeptide (I) associated with	Db	1189	CTTTGTCTCTCTCTCACCTTACCTTCTCTTCTTGATGGCGCTGACCTTCTCTCATGTCTC	1248
CC	breast cancer which is encoded by a nucleic acid molecule comprising a				
CC	nucleotide sequence (SI). Further disclosed is an antibody that binds to	Qy	841	CTTACCTTCTGTGGTCTCTTACGGGCTGGAAGAGACATGGGGCCACATCTACCTCAC	900
CC	the polypeptide of the invention. The activity of the polypeptide of the	Db	1249	CTTACCTTCTGTGGTCTCTTACGGGCTGGAAGAGACATGGGGCCACATCTACCTCAC	1308
CC	invention may be described as cytostatic. The antibody is useful for				
CC	detecting the presence of (I) in a sample. Nucleic acid molecules of the	Qy	901	GATGCTCTCTCTCATTTGGCATCTGGGTGGGCTGGATCACCCTCTCATGCTTCTGACTT	960
CC	invention are useful in the detection of breast tumours. (I) is useful as	Db	1309	GATGCTCTCTCTCATTTGGCATCTGGGTGGGCTGGATCACCCTCTCATGCTTCTGACTT	1368
CC	a marker for breast cancer and in breast cancer therapy. Sequences given	Qy	961	TGACCGCAGGTGGGATGACACCATCTCAGCTCCGCTTGGCTGCCAATGGCTGGGTGTT	1020
CC	in records ACN78851-ACN92934 represent nucleic acid markers associated	Db	1369	TGACCGCAGGTGGGATGACACCATCTCAGCTCCGCTTGGCTGCCAATGGCTGGGTGTT	1428
CC	with breast cancer. Note: The sequence listing does not form part of the	Qy	1021	CTTGTGGCTTATGTTAGTCCCGAGTTTGGCTGCACAAAGCAACCAACCCCATGGA	1080

DR Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs.

XX Claim 8; SEQ ID NO 12388; 2537pp + Sequence Listing; English.

XX The present invention describes primer sets for synthesizing 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the 5602 complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesizing polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893

CC represent human amino acid sequences; and AAH13629 to AAH13632 represent CC oligonucleotides, all of which are used in the exemplification of the present invention

Novel receptors and associated proteins for diagnosis and treatment of neurological disorders, immunological disorders including autoimmune/inflammatory disorders and cell proliferative disorders such as cancer.

PS Disclosure; Page 111-112; 128pp; English.

XX

The present sequence is a human RECAP (receptors and associated proteins) polypeptide. RECAP polynucleotides and polypeptides are useful in the diagnosis, treatment and prevention of neurological disorders such as

CC stroke, Alzheimer's disease, Pick's disease, Huntington's disease,  
 CC dementia, Parkinson's disease, Down's syndrome, amyotrophic lateral  
 CC sclerosis, multiple sclerosis, bacterial and viral meningitis, CJD  
 CC (Creutzfeldt-Jakob disease), GSS (Gerstmann-Strausler-Scheinker  
 CC syndrome); immunological disorders, including autoimmune/inflammatory  
 CC disorders such as AIDS, Digeorge's syndrome, severe combined  
 CC immunodeficiency disease (SCID), Chediak-Higashi syndrome, Cushing's  
 CC disease, Addison's disease, autoimmune thyroiditis, Crohn's disease,  
 CC diabetes mellitus, Good pasture's syndrome, gout, Grave's disease,  
 CC Hashimoto's thyroiditis, Sjogren's syndrome, Werner's syndrome, viral,  
 CC bacterial, fungal, parasitic, protozoal, and helminthic infections; and  
 CC cell proliferation disorders such as arteriosclerosis, atherosclerosis,  
 CC cirrhosis, hepatitis and cancer

 XX Primer sets for synthesizing polynucleotides, particularly the 5602 full-  
 PT length cDNAs defined in the specification, and for the detection and/or  
 PT diagnosis of the abnormality of the proteins encoded by the full-length  
 XX cDNAs.  
 PS Claim 8; SEQ ID NO 12389; 2537pp + Sequence Listing; English.  
 XX  
 CC The present invention describes primer sets for synthesizing 5602 full-  
 CC length cDNAs defined in the specification. Where a primer set comprises:  
 CC (a) an oligo-dT primer and an oligonucleotide complementary to the  
 CC complementary strand of a polynucleotide which comprises one of the 5602  
 CC nucleotide sequences defined in the specification, where the  
 CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination  
 CC of an oligonucleotide comprising a sequence complementary to the  
 CC complementary strand of a polynucleotide which comprises a 5'-end  
 CC polynucleotide which comprises a 3'-end sequence, where the  
 CC polynucleotide comprises at least 15 nucleotides and the combination of  
 CC the 5'-end sequence/3'-end sequence is selected from those defined in the  
 CC specification. The primer sets can be used in antisense therapy and in  
 CC gene therapy. The primers are useful for synthesizing polynucleotides,  
 CC particularly full-length cDNAs. The primers are also useful for the  
 CC detection and/or diagnosis of the abnormality of the proteins encoded by  
 CC the full-length cDNAs. The primers allow obtaining of the full-length  
 CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and  
 CC AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893  
 CC represent human amino acid sequences; and AAH13629 to AAH13632 represent  
 CC oligonucleotides, all of which are used in the exemplification of the  
 CC present invention

PT like RAIG1) polypeptide and gene, useful for diagnosing or treating
PT metabolic disorders, e.g. obesity, anorexia, cachexia or diabetes.
XX
PS Disclosure; Page 19-20; 150pp; English.
XX
CC The present sequence is that of human G-protein coupled receptor-like
CC retinoic acid induced gene 1 (GPCR-like RAIG1) protein. This is the human
CC homologue of murine GPCR-like RAIG1 (see ABR42648). The murine GPCR-like
CC RAIG1 gene was shown to be differentially regulated during fasting-
CC feeding cycles, with moderate induction early in fasting, down-regulation
CC with extended fasting and 4-fold up-regulation with feeding in recovery
CC from fasting. The differentially expressed gene, its mRNA, and the
CC encoded protein, can each be manipulated to detect and treat metabolic
CC disorders associated with up- or down-regulation of GPCR-like RAIG1
CC activity, such as obesity, anorexia, cachexia or diabetes

New isolated antigenic peptides e.g., for G protein-coupled receptors (GPCR), useful for diagnosing and designing drugs for treating conditions in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or autoimmune diseases.  
Disclosure; Fig 1; 523pp; English.  
The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino acids. Also described: (1) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR, and in the production of specific antibodies. The peptides and antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, growth-related diseases, cell regeneration-related disease, immunological-related cell proliferative diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease, atherosclerosis, bacterial, fungal, protozoan or viral infections, osteoarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute inflammation, allergies, Crohn's disease, diabetes, graft versus host disease, Parkinson's disease, multiple sclerosis, pain, psoriasis, anxiety, depression, schizophrenia, dementia, mental retardation, memory loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension, hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder in which GPCRs are involved. The antibodies may be used in immunoassays and immunodiagnosis. AB242523 to AB242869 encode GPCR proteins given in ABP81675 to ABP82018, which are used in the exemplification of the present invention

PT Screening, diagnosing and/or treating carcinoma, including breast,  
PT pancreatic, lung, liver, ovarian and colon cancer by detecting the change  
PT in expression or activity of an RAIG1 polypeptide or encoding nucleic  
XX acid molecule.  
PS Claim 1; Fig 1; 43pp; English.  
XX  
CC This sequence represents retinoic acid-inducible gene 1 (RAIG1)  
CC polypeptide. RAIG1 is an orphan G-protein coupled receptor (GPCR) located  
CC on chromosome 12. RAIG1 shows a restricted expression pattern compared to  
CC a related receptor, GPCR5B, which is widely expressed in peripheral and  
CC central tissues. The RAIG1 cDNA and polypeptide sequence may be used in  
CC the method of the invention for screening for and/or diagnosis of carcinoma  
CC carcinoma in a subject, and/or monitoring the effectiveness of carcinoma  
CC therapy. The method comprises detecting and/or quantifying in a  
CC biological sample obtained from the subject an RAIG1 polypeptide and a  
CC nucleic acid molecule. The RAIG1 polypeptide and nucleic acid molecule  
CC are useful in the manufacture of a medicament for the treatment of  
CC carcinoma, where the composition is a vaccine. An agent which interacts  
CC with or causes change in the expression or activity of an RAIG1  
CC polypeptide or nucleic acid molecule, is also useful in the manufacture  
CC of a medicament for the treatment of carcinoma that is breast cancer,  
CC pancreatic cancer, lung cancer, liver cancer, ovarian cancer, colon  
CC cancer and/or osteosarcoma. They can also be used in the diagnosis and  
XX screening of such carcinomas.

XX New nucleic acid molecule encoding a human G-protein coupled receptor,  
PT RAI3, useful for preventing, treating or ameliorating chronic obstructive  
PT pulmonary disease (COPD), COPD-like disorder, or the underlying symptoms  
PT of COPD.  
XX Claim 5; SEQ ID NO 3; 301pp; English.  
XX The present sequence is the protein sequence of a human G-protein coupled  
CC receptor (Class C, Group 5), denoted retinoic acid induced 3 (RAI-3).  
CC Proteomics methods were used to isolate cigarette smoke-inducible  
CC tyrosine phosphorylated proteins from airway epithelial cells. RAI-3 was  
CC identified as being tyrosine phosphorylated and/or as being  
CC associated/complexed with tyrosine phosphorylated proteins only in cells  
CC that had been exposed to cigarette smoke. Since RAI-3 is primarily  
CC expressed in lung tissue, and since cigarette smoke is a major causative  
CC factor of chronic obstructive pulmonary disease (COPD), RAI-3 provides a  
CC novel cellular target for identifying modulators, e.g. agonists or  
CC antagonists, useful for the treatment and/or prevention of COPD and  
CC related disorders such as emphysema and chronic bronchitis. RAI-3  
CC modulators, e.g. agonists and antagonists, especially antisenese  
CC compounds, can be used to treat COPD and other disorders and diseases  
CC associated with regulation of NF-kB and/or its associated or interacting  
CC signalling molecules. Single nucleotide polymorphisms (SNPs) detected in  
CC the RAI-3 gene are useful for determining COPD association in  
CC individuals. 3 Of the SNPs result in alterations in the RAI-3 amino acid  
CC sequence. Of these, Ser118Gly and Thr182A are at positions which are not  
CC conserved between human and murine RAI-3 sequences, whereas Gln307Arg  
CC involves a conserved amino acid residue. RAI-3 nucleic acid molecules and  
CC polypeptides are useful for preventing, treating or ameliorating  
CC disorders related to aberrant GPCR signaling or cell cycle regulation,  
CC pulmonary disorders, inflammatory lung disorders, COPD, the underlying  
CC symptoms of COPD, COPD-related disorders or conditions, autoimmune  
CC disorders, disorders related to hyperimmune activity, inflammatory

CC conditions, disorders related to aberrant acute phase responses,  
CC hypercongenital conditions, birth defects, necrotic lesions, wounds,  
CC organ transplant rejection, renal diseases, ischaemia-reperfusion injury,  
CC heart disorders, disorders related to aberrant signal transduction,  
CC proliferation disorders, cancers, HIV infection, asthma, cystic fibrosis,  
CC pulmonary fibrosis, ulcerative colitis, cerebral infarct, myocardial  
CC infarct, diabetic nephropathy, allergic rhinitis, Crohn's disease,  
CC atherosclerosis, rheumatoid arthritis, inflammatory/autoimmune disorders,  
CC glioblastoma, pulmonary small cell undifferentiated carcinoma, carcinoma  
CC of the breast, colon, lung, ovary, pancreas, prostate, non-Hodgkin's  
CC lymphoma, disorders associated with aberrant cell adhesion, I-CAM  
CC function and/or regulation, E-selectin function and/or regulation, or  
CC aberrant NF-kB function and/or regulation (all claimed).

CC Claim 12; SEQ ID NO 3499; 7273pp; English.  
CC The invention relates to human tumour-associated antigenic target (TAT)  
CC polypeptides, and their related nucleic acids. The TAT polypeptides are  
CC overexpressed in cancer tissues compared to normal tissues, and may thus  
CC serve as effective targets for the diagnosis and treatment of cancer in  
CC mammals. The invention also relates to nucleic acid and polypeptide  
CC sequences at least 80% identical to the TAT nucleic acids and  
CC polypeptides; expression vectors and host cells comprising a TAT nucleic  
CC acid; an antibody specific for a TAT polypeptide; a peptide or organic  
CC molecule which binds to a TAT polypeptide; fusion proteins comprising a  
CC TAT polypeptide; and methods and compositions for the treatment or  
CC diagnosis of cancer in mammals. TAT polypeptides, nucleic acids,  
CC antibodies, antagonists, binding molecules and compositions are useful  
CC for diagnosing or treating a cell proliferative disorder associated with  
CC increased TAT expression, particularly cancers such as breast cancer,  
CC colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder  
CC cancer, pancreatic cancer, cervical cancer, cancers of the central  
CC nervous system, melanoma and leukaemia. TAT nucleic acids may further be  
CC used as hybridisation probes, in chromosome and gene mapping, in  
CC chromosome identification and in gene therapy. The present sequence  
CC represents a TAT polypeptide of the invention

XX Novel isolated antibody capable of binding to tumor-associated antigenic  
PT target polypeptide, useful for treating cell proliferative disorder e.g.  
PT cancer.  
XX  
XX Claim 1; SEQ ID NO 142; 337pp; English.  
XX  
XX The invention relates to a novel isolated antibody binding to a  
CC polypeptide having at least 80% sequence identity to a polypeptide having  
CC any one of 76 fully defined 182-910 amino acid tumor-associated antigenic

CC target polypeptide (TAT) sequences (AEA00127-AEA00202) given in the  
CC specification, a polypeptide having any one of (AEA00127-AEA00202),  
CC lacking its associated signal peptide, or an extracellular domain of a  
CC polypeptide having any one of (AEA00127-AEA00202). The polypeptide is  
CC encoded by the nucleotide sequence having any one of (AEA00049-AEA00126).  
CC An antibody of the invention has cytostatic activity. The antibody is  
CC useful for inhibiting growth of a cell expressing TAT188, which involves  
CC contacting the cell with the antibody. The cell is a cancer cell chosen  
CC from breast, colon, rectum, endometrium, kidney, lung, ovary, skin and  
CC liver cell. The cancer cell is a mammalian cell, preferably a human cell.  
CC The antibody is also useful for detecting the level of TAT188  
CC polypeptide expressed in a test cell relative to a control cell, and for  
CC detecting the level of TAT188 polypeptide or a polypeptide having at  
CC least 80 % sequence identity to the TAT188 polypeptide sequence in a test  
CC cell relative to a control cell. The antibody is useful for treating a  
CC preventing a cell proliferative disorder associated with increased  
CC expression or activity of a polypeptide having at least 80 % identity to  
CC a TAT188 polypeptide sequence. The cell proliferative disorder is cancer.  
CC The method of the invention is useful for inhibiting the growth of a  
CC cancer cell. The present sequence represents a polypeptide of the  
CC invention.

TITLE     Full-length cDNA libraries and normalization
JOURNAL   Unpublished (2001)
COMMENT   Contact: Genoscope
            Genoscope - Centre National de Sequencage
            2 rue Gaston Cremieux, CP 5706 - 91057 EVRY cedex - FRANCE
            Email: seqrefgenoscope.cns.fr, Web : www.genoscope.cns.fr
            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
            was normalized. Library was constructed by Life Technologies, a
            division of Invitrogen. This sequence belongs to sequence cluster
            6601.f
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0D1025D05NP1&c=6601.f.

RESULT 4				
CO894732				
LOCUS	6730 bp DNA linear PAT 05-NOV-2004			
DEFINITION	Sequence 42 from Patent EP1471075.			
ACCESSION	CO894732			
VERSION	CO894732.1 GI:55467481			
KEYWORDS	Homo sapiens (human)			
SOURCE	Homo sapiens			
ORGANISM	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini; Hominidae; Homo.			
REFERENCE	1			
AUTHORS	Rosenthal, A.D., Pillarsky, C., Dahl, E., Specht, T., Brummendorf, T., Lichtner, R., Staub, E., Roepcke, S. and Li, X.I.			
TITLE	Human nucleic acid sequences expressed in pancreatic carcinomas			
JOURNAL	Patent: EP 1471075-A 42 27-OCT-2004; Hinzmann, Bernd (DE); Rosenthal, Andre (DE); Pillarsky, Christian (DE); Dahl, Edgar (DE); Specht, Thomas (DE); Lichtner, Rosemarie (DE)

RESULT 15
AKI72760
LOCUS
DEFINITION Homo sapiens cDNA FLJ23921 fis, clone COL02043, highly similar to
Homo sapiens retinoic acid induced 3 (RAI3).
ACCESSION AKI72760
VERSION AKI72760.1 GI:47077732
KEYWORDS oligo capping; fis (full insert sequence).
SOURCE Homo sapiens (human)
ORGANISM Homo sapiens
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini;
Hominidae; Homo.

NEDO human cDNA sequencing project
Unpublished
2 (bases 1 to 1826)
Sugano,S. and Suzuki,Y.
Direct Submission
Submitted (22-APR-2004) Sumio Sugano, Institute of Medical Science,
University of Tokyo, Laboratory of Genome Structure, Human Genome
Center; Shirokane-dai, 4-6-1, Minato-ku, Tokyo 108-8639, Japan
(E-mail: fclidna@mail.ims.u-tokyo.ac.jp, Tel:81-3-5449-5286,
Fax:81-3-5449-5416)
COMMENT NEDO human cDNA sequencing project supported by Ministry of
Economy, Trade and Industry of Japan; cDNA full insert sequencing;
Research Association for Biotechnology; cDNA library construction;
5'- & 3'-end one pass sequencing; Department of Virology and Human
Genome Center, Institute of Medical Science, University of Tokyo
(partly supported by Science and Technology Agency).

 CC -!- FUNCTION: Unknown. This G-protein coupled receptor could be  
 CC involved in modulating differentiation and maintaining homeostasis  
 CC of epithelial cells. The comparable expression level in fetal lung  
 CC and kidney with adult tissues suggests a possible role in  
 CC embryonic development and maturation of these organs. This  
 CC retinoic acid-inducible GPCR provide evidence for a possible  
 CC interaction between retinoid and G-protein signaling pathways.  
 CC -!- SUBCELLULAR LOCATION: Integral membrane protein. Localized in the  
 CC plasma membrane and perinuclear vesicles.  
 CC -!- TISSUE SPECIFICITY: Expressed at high level in fetal and adult  
 CC lung tissues. Constitutively expressed in fetal kidney and adult  
 CC placenta, kidney, prostate, testis, ovary, small intestine, colon,  
 CC stomach, and spinal chord at low to moderate levels. Not  
 CC detectable in fetal heart, brain, and liver and adult heart,  
 CC brain, liver, skeletal muscle, pancreas, spleen, thymus, and  
 CC peripheral leukocytes. According to Ref.5: expressed at low but  
 CC detectable level in pancreas and heart.  
 CC -!- INDUCTION: By all-trans retinoic acid (ATRA).  
 CC -!- SIMILARITY: Belongs to the G-protein coupled receptor 3 family.

CC -!- FUNCTION: Unknown.  
CC -!- SUBCELLULAR LOCATION: Membrane; multi-pass membrane protein.  
CC -!- ALTERNATIVE PRODUCTS:  
CC Event=Alternative splicing; Named isoforms=3;  
CC Name=1;  
CC IsoId=Q9NZD1-1; Sequences=Displayed;  
CC Name=2;  
CC IsoId=Q9NZD1-2; Sequences=VSP\_010006, VSP\_010007;  
CC Name=3;  
CC IsoId=Q9NZD1-3; Sequences=VSP\_010008;  
CC -!- TISSUE SPECIFICITY: Widely expressed in the peripheral system.  
CC Expression pattern is high in pancreas, medium in kidney, small  
CC intestine, spleen and testis, low in lung, colon, leukocyte,  
CC prostate and thymus and not detectable in brain, heart, liver,  
CC placenta, skeletal muscle and ovary.  
CC -!- SIMILARITY: Belongs to the G-protein coupled receptor 3 family.

CC -!- FUNCTION: Unknown. This retinoic acid-inducible G-protein coupled
receptor provide evidence for a possible interaction between
retinoid and G-protein signaling pathways (By similarity).
CC -!- SUBCELLULAR LOCATION: Membrane; multi-pass membrane protein.
CC -!- SIMILARITY: Belongs to the G-protein coupled receptor 3 family.

CC -!- FUNCTION: Unknown. This retinoic acid-inducible G-protein coupled  
CC receptor provide evidence for a possible interaction between  
CC retinoid and G-protein signaling pathways (By similarity).  
CC -!- INTERACTION:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

INFORMATION: <http://www.hgsc.bcm.tmc.edu/> or email  
[gc-help@bcm.tmc.edu](mailto:gc-help@bcm.tmc.edu)  
CLONE LENGTH: This sequence does not necessarily represent the  
entire insert of this clone. Overlapping regions of clones are only  
sequenced and submitted once, so the sequence for the remainder of  
the insert may be found in the record for the adjacent clones.  
Overlapping clones are noted at the beginning and end of the  
Features listing.  
ANNOTATION OF FEATURES:  
STSs are identified using ePCR (Genome Res. 7:541-550) searches  
of a local database that includes entries from dbSTS, GDB, and  
local mapping efforts.  
Repeats are identified using RepeatMasker (A. Smit and P. Green,  
unpublished.) for Human and Mouse sequences.  
Genes and Region of sequence similarity are identified by BLAST  
(Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the  
EST and cDNA sequences. Genes demonstrate at least two exons  
flanked by consensus splice sites that maintained sequence  
continuity across the splice junctions. Sequences that are not  
identical matches are annotated as similar.  
SEQUENCING READ COVERAGE: Sequencing is completed to a minimum  
standard of double strand coverage with a minimum of 2 clones and 2  
reads with no ambiguities or 2 chemistries with a minimum of 2  
clones and 3 reads with no ambiguities. If the sequence quality for  
a region does not meet this standard, it will be indicated in the  
annotation as Low Coverage.  
QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality  
standards - estimated error rate less than 1 per 10,000 bases.  
Reports of lowest quality individual bases and measures of base  
quality are listed below. Description of the metrics can be found  
at URL:  
<http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html>.

Baylor Plaza, Houston, TX 77030, USA
3 (bases 1 to 194709)
Rat Genome Sequencing Consortium.
Direct Submission
Submitted (15-NOV-2002) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Nov 15, 2002 this sequence version replaced gi:23908481.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature

The sequence in this assembly is a combination of BAC based reads  
and whole genome shotgun sequencing reads assembled using Atlas  
(<http://www.hgsc.bcm.tmc.edu/projects/rat/>). As a result, the  
sequence may extend beyond the ends of the clone and there may be  
contigs that consist entirely of whole genome shotgun sequence  
reads. Both end sequences and whole genome shotgun sequence only  
contigs will be indicated in the feature table.

Rat Genome Sequencing Consortium.

Direct Submission

Submitted (13-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On May 13, 2003 this sequence version replaced gi:23116012.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated

## COMMENT

by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

JOURNAL			
On May 13, 2003 this sequence version replaced gi:22856732.			
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

#### NOTICE:

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

#### MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

#### SOURCE INFORMATION:

The RPCI-24 BAC Library has been constructed by Pieter de Jong and coworkers (<http://www.chori.org>) from male C57BL/6J mouse spleen and/or brain genomic DNA. The clone and detailed information can be obtained from Pieter de Jong and coworkers at <http://www.chori.org>

#### NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone.

On Nov 13, 2002 this sequence version replaced gi:22772986.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

Contact: [nisc\\_zoo@nhgri.nih.gov](mailto:nisc_zoo@nhgri.nih.gov)  
----- Project Information  
Center project name: keo  
Center clone name: 138P06

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is generally based on at least 8x average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

----- Summary Statistics  
Sequencing vector: plasmid; n/a; 100% of reads  
Chemistry: Dye-terminator Big Dye; 100% of reads  
Assembly program: Phrap; version 0.990319  
Consensus quality: 172156 bases at least Q40  
Consensus quality: 172470 bases at least Q30

Coding sequences below are the result of integration and manual review of the following data : computer analysis using the program GeneFinder (P. Green and L. Hillier, personal communication), the large scale EST projects of Yuji Kohara ([http://www.ddbj.nig.ac.jp/c-elegans/html/CE\\_INDEX.html](http://www.ddbj.nig.ac.jp/c-elegans/html/CE_INDEX.html)) and The C. elegans ORFeome cloning project (<http://worldb.dfci.harvard.edu/>), similarity to other proteins from Blastx analyses (<http://blast.wustl.edu/>), sequence conservation with C. briggsae using Jim Kent's WABA alignment program (Genome Research 10:1115-1125, 2000), individual C. elegans GenBank submissions, and personal communications with C. elegans researchers. tRNAs are predicted using the program tRNAscan-SE (Lowe, T.M. and Eddy, S.R., 1997, Nucl. Acids. Res., 25, 955-964).

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

## ANNOTATION OF FEATURES:

STS are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL:

http://www.hgsc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

----- Genome Center  
Center: Washington University Genome Sequencing Center  
Web site: WUGSC  
Contact: submissions@watson.wustl.edu  
----- Summary Statistics  
-----  
Center project name: H\_NH0567N20  
-----  
NOTICE:  
This sequence was finished as follows unless otherwise noted:  
all regions were double stranded, sequenced with an alternate

chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

#### MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

#### SOURCE INFORMATION:

The RPEC11 human BAC library was made from the blood of one male donor, as described by Osogawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. *Genomics* 51:1-8. The clone may be obtained either from Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong and coworkers at <http://www.chori.org> VECTOR: pBACe3.6

#### NEIGHBORING SEQUENCE INFORMATION:

The clone sequenced to the left is RP11-249F13, 2000 bp overlap; the clone sequenced to the right is RP11-16D24. Actual start of this clone is at base position 149708 of RP11-249F13; actual end is at base position 136657 of RP11-567N20.

Data from AC011936 was used to finish the clone, AC068600. Polymorphisms have been identified between AC011936 and AC068600.

COMMENT

\* NOTE: This is a 'working draft' sequence. It currently

\* consists of 9 contigs. The true order of the pieces

\* is not known and their order in this sequence record is  
\* arbitrary. Gaps between the contigs are represented as  
\* runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence  
\* as soon as it is available and the accession number will  
\* be preserved.

1 2042: contig of 2042 bp in length

Center clone name: 142_P_5
-----
* NOTE: This record contains 81 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.
*
* 1 764: contig of 764 bp in length

Direct Submission  
Submitted (22-SEP-2002) Human Genome Sequencing Center, Department  
of Molecular and Human Genetics, Baylor College of Medicine, One  
Baylor Plaza, Houston, TX 77030, USA  
On Sep 19, 2002 this sequence version replaced gi:21908761.  
The sequence in this assembly is a combination of BAC based reads  
and whole genome shotgun sequencing reads assembled using Atlas  
(http://www.hgsc.bcm.tmc.edu/projects/rat/). As a result, the  
sequence may extend beyond the ends of the clone and there may be  
contigs that consist entirely of whole genome shotgun sequence  
reads. Both end sequences and whole genome shotgun sequence only  
contigs will be indicated in the feature table.

## NOTICE:

This sequence was finished as follows unless otherwise noted:  
all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by

 Submitted (09-NOV-2002) Human Genome Sequencing Center, Department  
 of Molecular and Human Genetics, Baylor College of Medicine, One  
 Baylor Plaza, Houston, TX 77030, USA  
 On Nov 9, 2002 this sequence version replaced gi:22772219.  
 The sequence in this assembly is a combination of BAC based reads  
 and whole genome shotgun sequencing reads assembled using Atlas  
 (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described  
 in the feature table below represents a scaffold in the Atlas  
 assembly (a 'contig-scaffold'). Within each contig-scaffold,  
 individual sequence contigs are ordered and oriented, and separated  
 by sized gaps filled with Ns to the estimated size. The sequence  
 may extend beyond the ends of the clone and there may be sequence  
 contigs within a contig-scaffold that consist entirely of whole  
 genome shotgun sequence reads. Both end sequences and whole genome  
 shotgun sequence only contigs will be indicated in the feature  
 table.

----- Summary Statistics  
Center project name: M\_BB0386H10  
-----

NOTICE: This sequence may not represent the entire insert of this  
clone. It may be shorter because we only sequence overlapping  
clone sections once, or longer because we provide a small overlap  
between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:  
all regions were double stranded, sequenced with an alternate  
chemistry, or covered by high quality data (i.e., phred quality >=  
30); an attempt was made to resolve all sequencing problems, such  
as compressions and repeats; all regions were covered by sequence  
from more than one subclone; and the assembly was confirmed by  
restriction digest.

MAPPING INFORMATION:  
Mapping information for this clone was provided by Dr. Wes Warren,  
Department of Genetics, Washington University, St. Louis MO. For  
additional information about the map position of this sequence, see  
<http://genome.wustl.edu>

SOURCE INFORMATION:  
The RPCI-24 BAC Library has been constructed by Pieter de Jong and  
coworkers (<http://www.chori.org>) from male C57Bl/6J mouse spleen  
and/or brain genomic DNA. The clone and detailed information can be  
obtained from Pieter de Jong and coworkers at <http://www.chori.org>

NEIGHBORING SEQUENCE INFORMATION:  
This sequence is the entire insert of the clone.

----- Summary Statistics  
Center project name: M\_BA0010B20  
-----

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:  
all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclones; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:  
Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

SOURCE INFORMATION:  
The RP23-10B20 BAC Library has been constructed by Kazutoyo Osegawa and Minako Tateno in the laboratory of Pieter de Jong (<http://www.chori.org>) from female C57BL/6J mouse kidney and/or brain genomic DNA. The clone and detailed information can be obtained from Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong and coworkers at <http://www.chori.org>

NEIGHBORING SEQUENCE INFORMATION:  
This sequence is the entire insert of the clone.

----- Project Information
```

Center project name: ayt  
Center clone name: 300L05

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8x average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

----- Summary Statistics

Sequencing vector: plasmid; n/a; 100% of reads  
Chemistry: Dye-terminator Big Dye; 100% of reads  
Assembly program: Phrap; version 0.990319  
Consensus quality: 207698 bases at least Q40  
Consensus quality: 208254 bases at least Q30  
Consensus quality: 208411 bases at least Q20  
Insert size: 168000; agarose-fp  
Insert size: 208453; sum-of-contigs  
Quality coverage: 13.81x in Q20 bases; agarose-fp  
Quality coverage: 11.13x in Q20 bases; sum-of-contigs  
-----

\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 8 contigs. Gaps between the contigs  
\* are represented as runs of N. The order of the pieces  
\* is believed to be correct as given, however the sizes  
\* of the gaps between them are based on estimates that have  
\* provided by the submitter.  
\* This sequence will be replaced  
\* by the finished sequence as soon as it is available and  
\* the accession number will be preserved.  
\* 1 28791: contig of 28791 bp in length  
\* 28792 28991: gap of unknown length  
\* 28892 94557: contig of 65666 bp in length  
\* 94558 121614: contig of 26957 bp in length  
\* 94658 121715: gap of unknown length  
\* 121615 177060: contig of 55346 bp in length  
\* 121715 177060: gap of unknown length  
\* 177061 180861: contig of 3701 bp in length

 Direct Submission  
 Submitted (19-NOV-2002) Human Genome Sequencing Center, Department  
 of Molecular and Human Genetics, Baylor College of Medicine, One  
 Baylor Plaza, Houston, TX 77030, USA  
 On Nov 19, 2002 this sequence version replaced gi:23913093.  
 The sequence in this assembly is a combination of BAC based reads  
 and whole genome shotgun sequencing reads assembled using Atlas  
 (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described  
 in the feature table below represents a scaffold in the Atlas  
 assembly (a 'contig-scaffold'). Within each contig-scaffold,  
 individual sequence contigs are ordered and oriented, and separated  
 by sized gaps filled with Ns to the estimated size. The sequence  
 may extend beyond the ends of the clone and there may be sequence  
 contigs within a contig-scaffold that consist entirely of whole  
 genome shotgun sequence reads. Both end sequences and whole genome  
 shotgun sequence only contigs will be indicated in the feature  
 table.

PT New isolated nucleic acids and polypeptides capable of eliciting a  
PT humoral and/or cellular immune response, useful for diagnosing,  
XX preventing or treating cancer, particularly colon cancer.  
PS Claim 1; SEQ ID NO 1937; 87pp; English.  
XX The invention relates to polynucleotide and polypeptide sequences  
CC associated with cancer, particularly colon cancer. Also disclosed are (i)  
CC an expression vector comprising the polynucleotide, (ii) a host cell  
CC transformed or transfected with the expression vector, (iii) an isolated  
CC antibody, or its antigen-binding fragment, which specifically binds to  
CC the polypeptide, (iv) a method of detecting or determining the presence  
CC of cancer in a patient, (v) a fusion protein comprising at least one of  
CC the polypeptides, (vi) an oligonucleotide that hybridises to the  
CC polynucleotide sequence under highly stringent conditions, and (vii) a  
CC method of stimulating and/or expanding T cells specific for a tumour  
CC protein. The polypeptide specifically comprises the amino acid sequence  
CC of C634S, C635S, C637S, C640S, C636S or one of the potential open reading  
CC frames (ORFs) of C636S. These polypeptides are encoded by the  
CC polynucleotide sequences, where both are capable of eliciting a humoral  
CC and/or cellular immune response. The polynucleotides, polypeptides, and  
CC antibodies are useful for diagnosing, preventing or treating cancer,  
CC particularly colon cancer. The polynucleotide and polypeptide sequences  
CC are also useful in DNA strand invasion, antisense inhibition, mutational  
CC analysis, nucleic acid purification, isolation of transcriptionally  
CC active genes, blocking or transcription factor binding, genome cleavage  
CC or in situ hybridisation, and as enhancers of transcription or  
CC biomarkers. This sequence represents a human colon cancer associated  
CC cDNA. Note: The sequence data for this patent was obtained in electronic  
CC format directly from the USPTO web site at seqdata.uspto.gov

PT Novel human proteins having hydrophobic domains used for research and
PT diagnostic purposes.
XX
PS Claim 3; Page 88; 117pp; English.
XX
CC This sequence represents the hydrophobic domain containing protein, clone
CC HP10549 coding region. The sequence is isolated from a human stomach
CC cancer cell line. The invention relates to human proteins with
CC hydrophobic domains, the DNA and the cDNA encoding them. The
CC polynucleotides and proteins are predicted to have biological activities
CC which make them suitable for treating, preventing or ameliorating medical
CC conditions in humans and animals. Suggested activities include
CC nutritional activity (nutritional source or supplement); cytokine and
CC cell proliferation/differentiation activity; immune stimulating (e.g. as
CC vaccines) or suppressing activity (e.g. to treat various immune
CC
CC deficiencies such as SCIDS or HIV, connective tissue disease, systemic
CC lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary
CC inflammation, Guillain-Barre syndrome, autoimmune thyroiditis, insulin
CC dependent diabetes mellitus, myasthenia gravis, graft-versus-host disease
CC and autoimmune inflammatory eye disease, as well as asthma, allergies and
CC organ transplantation); haematopoiesis regulating activity (e.g. in
CC treatment of myeloid or lymphoid cell deficiencies); tissue growth
CC activity (e.g. wound healing and tissue repair, ulcers, burns,
CC periodontal disease); activin/inhibin activity; chemotactic/chemokinetic
CC activity; haemostatic and thrombolytic activity (e.g. treating
CC haemophilias); receptor/ligand activity; anti-inflammatory activity; and
CC tumour inhibition activity. The polynucleotides are also stated to be
CC useful for gene therapy. Other activities include inhibiting infections
CC caused by bacteria, fungi, viruses and other parasites (e.g. Hepatitis,
CC malaria); effecting bodily characteristics such as, e.g. weight, colour,
CC skin, effecting biorhythms or cardiac cycles; enhancing fertility;
CC treatment of depression; treatment of pain; hormonal or endocrine
CC activity. The polynucleotides may also be used for recombinant expression
CC of the protein

XX Novel isolated polypeptide encoded by breast cancer marker gene, useful  
PT for diagnosing, staging, monitoring, prognosing and treating diseases  
PT associated with breast cancer.

PS Disclosure; Page 187-188; 725pp; English.

XX The invention relates to an isolated polypeptide encoded by a breast  
CC cancer marker gene comprising any of 141/21-805 nucleotide sequences,  
CC given in the specification. The methods of the invention are useful for  
CC diagnosing patients having an identified breast mass or symptoms  
CC associated with breast cancer, to diagnose breast cancer or its  
CC precursors, and for monitoring the efficacy of treatment of a breast  
CC cancer patient (e.g. efficacy of chemotherapy). The methods are also  
CC useful for evaluating a patient before, after or during therapy, to  
CC evaluate the reduction in a tumour burden. The breast cancer marker gene  
CC proteins are useful as immunogens for raising antibodies, by immunising a  
CC mammal with a breast cancer marker protein. The marker proteins are  
CC useful as bait proteins in a two-hybrid or three-hybrid assay, to  
CC identify other proteins which bind to or interact with the marker  
CC proteins. The breast cancer marker genes are useful as surrogate marker  
CC genes for one or more disorders, disease states or conditions leading to  
CC disease states, in particular, breast cancers. The breast cancer marker  
CC genes are useful as pharmacodynamic marker genes. An antibody which  
CC selectively binds to a protein of a breast cancer marker gene is useful  
CC for treating cancers, particularly breast cancers. The host cell of the  
CC polynucleotide sequence represents one of the breast cancer marker genes  
CC of the invention

CC dermal papilla, human keratinocytes and neonatal foreskin fibroblasts,  
CC and mouse embryonic skin, keratinocyte stem cells and transit amplifying  
CC cells. Polypeptides of the invention may be used to treat inflammation,  
CC cancer and neurological diseases. The proteins may be used to stimulate  
CC the growth and motility of keratinocytes, to inhibit the growth of cancer  
CC cells, to modulate angiogenesis and tumour vascularisation, to modulate  
CC skin inflammation, to modulate epithelial cell growth and to inhibit  
CC binding of HIV-1 to leukocytes. The invention may also be used to treat  
CC growth and developmental defects, skin wounds and hair follicle  
CC disorders. Sequences AAZ61606-261832 represent cDNA sequences derived  
CC from several mice, rat or human skin cell types. Sequences AAZ61606-  
CC Z61649, AAZ61725-261765, AAZ61802-261811 and AAZ61826 encode proteins  
CC with an N-terminal signal sequence, indicating that the proteins are  
CC secreted. Sequences AAZ61650-261668, AAZ61766-261780, AAZ61812-261817 and  
CC AAZ61827-261829 encode proteins with one or more putative transmembrane  
CC domains

XX Combination for research/diagnostic applications and for monitoring
PT treatment of e.g., cancer, comprises polynucleotides comprising a
PT fragment of gene encoding membrane-associated proteins, receptors or ion
PT channels.
PS
XX Claim 1; Col 215-216; 147pp; English.
XX
XX The invention relates to a combination comprising several polynucleotide
CC sequences comprising a fragment of gene encoding membrane-associated
CC proteins, receptors or ion channels. The combination is useful as a
CC probe, for research and diagnostic applications, for monitoring the
CC expression of several expressed polynucleotides, in the diagnosis and
CC monitoring of treatment of pancreatic disease, cancer, immunopathology or
CC neuropathology, for investigating an individual's predisposition to the
CC above disease, in genetic or gene expression analysis of polynucleotide
CC sequences, to investigate cellular responses to infection or drug
CC treatment, as hybridisable array elements in a microarray, to purify a
CC subpopulation of mRNAs, cDNAs or genomic fragments in a sample, in
CC diagnostics, prognostics and treatment regimens, in drug discovery and
CC development, in toxicological and carcinogenicity studies, and in
CC forensics or pharmacogenomics, to monitor the progression of disease, to
CC monitor the efficacy of treatment, to diagnose the conditions of the
CC pancreas e.g. diabetes, pancreatic cholera, hyperlipidaemia or
CC fibrocystic disease, to diagnose a cancer e.g. leukaemia, adenocarcinoma
CC or sarcoma, to diagnose immunopathologies e.g. AIDS, allergies, anaemia,
CC asthma or gout, to diagnose neuropathologies e.g. Alzheimer's disease,
CC dementia or Huntington's disease, to rapidly screen large numbers of
CC candidate drug molecules and as query sequences against GenBank,
CC SwissProt, BLOCKS and PRINTS databases. The combination is employed to
CC fine tune the treatment regimen and thus the expression patterns
CC associated with undesirable side effects are avoided. The present
CC sequence represents a cDNA encoding a fragment of gene encoding human
CC membrane-associated proteins, receptors or ion channels

XX Novel isolated antibody capable of binding to tumor-associated antigenic
PT target polypeptide, useful for treating cell proliferative disorder e.g.
PT cancer.
XX
XX Claim 1; SEQ ID NO 64; 337pp; English.
PS
XX
XX The invention relates to a novel isolated antibody binding to a
CC polypeptide having at least 80% sequence identity to a polypeptide having
CC any one of 76 fully defined 182-910 amino acid tumor-associated antigenic
CC target polypeptide (TAT) sequences (AEA00127-AEA00202) given in the
CC specification, a polypeptide having any one of (AEA00127-AEA00202),
CC lacking its associated signal peptide, or an extracellular domain of a
CC polypeptide having any one of (AEA00127-AEA00202). The polypeptide is
CC encoded by the nucleotide sequence having any one of (AEA00049-AEA00126).
CC An antibody of the invention has cytostatic activity. The antibody is
CC useful for inhibiting growth of a cell expressing TAT188, which involves
CC contacting the cell with the antibody. The cell is a cancer cell chosen
CC from breast, colon, rectum, endometrium, kidney, lung, ovary, skin and
CC liver cell. The cancer cell is a mammalian cell, preferably a human cell.
CC The antibody is also useful for detecting the level of TAT188
```

CC polypeptide expressed in a test cell relative to a control cell, and for  
CC detecting the level of TAT188 polypeptide or a polypeptide having at  
CC least 80 % sequence identity to the TAT188 polypeptide sequence in a test  
CC cell relative to a control cell. The antibody is useful for treating a  
CC preventing a cell proliferative disorder associated with increased  
CC expression or activity of a polypeptide having at least 80 % identity to  
CC a TAT188 polypeptide sequence. The cell proliferative disorder is cancer.  
CC The method of the invention is useful for inhibiting the growth of a  
CC cancer cell. The present sequence encodes a polypeptide of the invention.

XX Novel isolated antibody e.g. anti-E16 or anti-TAT112 antibody that binds  
PT to tumor-associated antigenic target polypeptide, useful for diagnosing  
PT or treating cancer.

XX Claim 1; SEQ ID NO 64; 96pp; English.  
XX This invention relates to a novel isolated antibody, for example anti-E16  
CC or anti-TAT112 antibody, that binds to a tumor-associated antigenic  
CC target polypeptide (TAT) and that lacks an associated signal peptide  
CC sequence. The invention may be useful for the development of compounds  
CC with a cytostatic activity acting as antagonists of the TAT188  
CC polypeptide or RNA interference whilst the disclosed sequences may be  
CC useful for gene therapy. The invention is useful for inducing the death

CC of a cell (such as a cancer cell chosen from breast, colon, rectum,  
CC endometrium, kidney, lung, ovary, skin and liver) to which it binds,  
CC inhibiting proliferation or promoting cell death of a cell expressing  
CC TAT188. In addition, the invention may be useful for detecting the level  
CC of TAT188 polypeptide in a test cell relative to a control cell, or  
CC treating or preventing a cell proliferative disorder associated with  
CC increased expression of TAT188. The novel antibody of the invention is  
CC useful for inhibiting the growth of a cancer cell and may be useful for  
CC diagnosing or treating cancer. The present sequence is that of the human  
CC TAT143 cDNA which encodes a protein against which an antibody of the  
CC invention may be targeted.

XX Novel receptors and associated proteins for diagnosis and treatment of  
PT neurological disorders, immunological disorders including autoimmune/  
PT inflammatory disorders and cell proliferative disorders such as cancer.

XX Example 5; Page 126-127; 128pp; English.

XX The present sequence encodes a human RECAP (receptors and associated  
CC proteins) polypeptide. RECAP polynucleotides and polypeptides are useful  
CC in the diagnosis, treatment and prevention of neurological disorders such  
CC as stroke, Alzheimer's disease, Pick's disease, Huntington's disease,  
CC dementia, Parkinson's disease, Down's syndrome, amyotrophic lateral  
CC sclerosis, multiple sclerosis, bacterial and viral meningitis, CJD  
CC (Creutzfeldt-Jakob disease), GSS (Gerstmann -Straussler-Scheinker

```
CC syndrome); immunological disorders, including autoimmune/inflammatory
CC disorders such as AIDS, DiGeorge's syndrome, severe combined
CC immunodeficiency disease (SCID), Chediak-Higashi syndrome, Cushing's
CC disease, Addison's disease, autoimmune thyroiditis, Crohn's disease,
CC diabetes mellitus, Good pasture's syndrome, gout, Grave's disease,
CC Hashimoto's thyroiditis, Sjogren's syndrome, Werner's syndrome, viral,
CC bacterial, fungal, parasitic, protozoal, and helminthic infections; and
CC cell proliferation disorders such as arteriosclerosis, atherosclerosis,
CC cirrhosis, hepatitis and cancer

PT Novel human proteins having hydrophobic domains used for research and
PT diagnostic purposes.
XX
PS Claim 4; Page 111-113; 117pp; English.
XX
CC This sequence represents the hydrophobic domain containing protein, clone
CC HP10549 nucleotide sequence. The sequence is isolated from a human
CC stomach cancer cell line. The invention relates to human proteins with
CC hydrophobic domains, the DNA and the cDNA encoding them. The
CC polynucleotides and proteins are predicted to have biological activities
CC which make them suitable for treating, preventing or ameliorating medical
CC conditions in humans and animals. Suggested activities include
CC nutritional activity (nutritional source or supplement); cytokine and
CC cell proliferation/differentiation activity; immune stimulating (e.g. as
CC vaccines) or suppressing activity (e.g. to treat various immune
CC deficiencies such as SCIPs or HIV, connective tissue disease, systemic
CC lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary
CC inflammation, Guillain-Barre syndrome, autoimmune thyroiditis, insulin
CC
```

```
CC dependent diabetes mellitus, myasthenia gravis, graft-versus-host disease
CC and autoimmune inflammatory eye disease, as well as asthma, allergies and
CC organ transplantation; haematopoiesis regulating activity (e.g. in
CC treatment of myeloid or lymphoid cell deficiencies); tissue growth
CC activity (e.g. wound healing and tissue repair, ulcers, burns,
CC periodontal disease); activin/inhibin activity; chemotactic/chemokinetic
CC activity; haemostatic and thrombolytic activity (e.g. treating
CC haemophilias); receptor/ligand activity; anti-inflammatory activity; and
CC tumour inhibition activity. The polynucleotides are also stated to be
CC useful for gene therapy. Other activities include inhibiting infections
CC caused by bacteria, fungi, viruses and other parasites (e.g. Hepatitis,
CC malaria); effecting bodily characteristics such as, e.g. weight, colour,
CC skin, effecting biorhythms or cardiac cycles; enhancing fertility;
CC treatment of depression; treatment of pain; hormonal or endocrine
CC activity. The polynucleotides may also be used for recombinant expression
CC of the protein

PT Diagnosing breast cancer in a patient comprises detecting the level of
PT gene expression in cell or tissue samples, where a differential gene
PT expression is indicative of breast cancer.
XX
PS Claim 1; SEQ ID NO 307; 260pp + Sequence Listing; English.
XX
CC The present invention relates to methods of diagnosing breast cancer in a
CC patient, which comprise detecting the level of expression in a tissue
CC sample of two or more genes selected from those shown in ABT09867-
CC ABT1112, where a differential expression of the genes indicates breast
CC cancer. The methods are useful in diagnosing, treating, detecting the
CC progression, and in monitoring treatment of breast cancer in patients.
CC The methods are also useful as a screening tool for agents that modulate
CC the onset or progression of breast cancer. The breast cancer genes may be
CC
```

CC used as diagnostic markers for the prediction or identification of the  
CC malignant state of breast tissue, for confirming the type and progression  
CC of cancer, and for drug screening and assays. The present sequence is a  
CC coding sequence of the invention. Note: The sequence data for this patent  
CC did not form part of the printed specification, but was obtained in  
CC electronic format directly from WIPO at  
CC ftp.wipo.int/pub.published\_pct\_sequences

XX Screening, diagnosing and/or treating carcinoma, including breast,  
XX pancreatic, lung, liver, ovarian and colon cancer by detecting the change  
XX in expression or activity of an RAIG1 polypeptide or encoding nucleic  
XX acid molecule.

XX Claim 1; Fig 2; 43pp; English.

XX This sequence encodes retinoic acid-inducible gene 1 (RAIG1) polypeptide.  
XX RAIG1 is an orphan G-protein coupled receptor (GPCR) located on  
XX chromosome 12. RAIG1 shows a restricted expression pattern compared to a  
XX related receptor, GPCR5B, which is widely expressed in peripheral and  
XX central tissues. The RAIG1 cDNA and polypeptide sequence may be used in  
XX the method of the invention for screening for and/or diagnosis of  
XX carcinoma in a subject, and/or monitoring the effectiveness of carcinoma  
XX therapy. The method comprises detecting and/or quantifying in a  
XX biological sample obtained from the subject an RAIG1 polypeptide and a  
XX nucleic acid molecule. The RAIG1 polypeptide and nucleic acid molecule  
XX are useful in the manufacture of a medicament for the treatment of  
XX carcinoma, where the composition is a vaccine. An agent which interacts  
XX with or causes change in the expression or activity of an RAIG1  
XX polypeptide or nucleic acid molecule, is also useful in the manufacture  
XX of a medicament for the treatment of carcinoma that is breast cancer,  
XX pancreatic cancer, lung cancer, liver cancer, ovarian cancer, colon

CC cancer and/or osteosarcoma. They can also be used in the diagnosis and  
CC screening of such carcinomas.

XX Primer sets for synthesizing polynucleotides, particularly the 5602 full-
PT length cDNAs defined in the specification, and for the detection and/or
PT diagnosis of the abnormality of the proteins encoded by the full-length
PT cDNAs.
XX
XX Claim 8; SEQ ID NO 12388; 2537pp + Sequence Listing; English.
XX
XX The present invention describes primer sets for synthesizing 5602 full-
CC length cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the
CC complementary strand of a polynucleotide which comprises one of the 5602
CC nucleotide sequences defined in the specification, where the
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprising a sequence complementary to the
CC complementary strand of a polynucleotide which comprises a 5'-end
CC sequence and an oligonucleotide comprising a sequence complementary to a
CC polynucleotide which comprises a 3'-end sequence, where the
CC oligonucleotide comprises at least 15 nucleotides and the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC specification. The primer sets can be used in antisense therapy and in
CC gene therapy. The primers are useful for synthesizing polynucleotides,
CC particularly full-length cDNAs. The primers are also useful for the
CC detection and/or diagnosis of the abnormality of the proteins encoded by
CC the full-length cDNAs. The primers allow obtaining of the full-length
CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
CC represent human amino acid sequences; and AAH13629 to AAH13632 represent
CC oligonucleotides, all of which are used in the exemplification of the
CC present invention

XX
XX New isolated antigenic peptides e.g., for G protein-coupled receptors
PT (GPCR), useful for diagnosing and designing drugs for treating conditions
PT in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or
PT autoimmune diseases.
XX
XX Disclosure; Fig 1; 523pp; English.
XX
XX The present invention describes antigenic peptides (I) comprising: (a)
CC any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino
CC acids. Also described: (1) an assay for the detection of a particular G
CC protein-coupled receptor (GPCR) or a candidate polypeptide in a sample;
CC and (2) an isolated antibody having high specificity and high affinity or
CC avidity for a particular GPCR. (I) can be used as GPCR modulators and in
CC gene therapy. The antigenic peptides for GPCRs are useful in detecting an
CC antibody against a particular GPCR, and in the production of specific
CC antibodies. The peptides and antibodies are also useful for detecting the
CC presence or absence of corresponding GPCRs. The antigenic peptides for
CC GPCRs and antibodies are useful for diagnosing and designing drugs for
CC treating immune-related diseases, growth-related diseases, cell
CC regeneration-related disease, immunological-related cell proliferative
CC diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease,
CC atherosclerosis, bacterial, fungal, protozoan or viral infections,
CC osteoarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute

New nucleic acid molecule encoding a human G-protein coupled receptor,
RAI3, useful for preventing, treating or ameliorating chronic obstructive
pulmonary disease (COPD), COPD-like disorder, or the underlying symptoms
of COPD.
Claim 1; SEQ ID NO 2; 301pp; English.
The present sequence is that of cDNA encoding a human G-protein coupled
receptor (Class C, Group 5), denoted retinoic acid induced 3 (RAI-3).
Proteomics methods were used to isolate cigarette smoke-inducible
tyrosine phosphorylated proteins from airway epithelial cells. RAI-3 was
identified as being tyrosine phosphorylated and/or as being
associated/complexed with tyrosine phosphorylated proteins only in those
cells that had been exposed to cigarette smoke. Since RAI-3 is primarily
expressed in lung tissue, and since cigarette smoke is a major causative
factor of chronic obstructive pulmonary disease (COPD), RAI-3 provides a
novel cellular target for identifying modulators, e.g. agonists or
antagonists, useful for the treatment and/or prevention of COPD and
related disorders such as emphysema and chronic bronchitis. RAI-3
modulators, e.g. agonists and antagonists, especially antisense
compounds, can be used to treat COPD and other disorders and diseases
associated with regulation of NF-kB and/or its associated or interacting
signaling molecules. Single nucleotide polymorphisms (SNPs) detected in
the RAI-3 gene are useful for determining COPD association in
individuals. RAI-3 nucleic acid molecules and polypeptides are useful for
preventing, treating or ameliorating disorders related to aberrant GPCR
signaling or cell cycle regulation, pulmonary disorders, inflammatory
lung disorders, COPD, the underlying symptoms of COPD, COPD-related
disorders or conditions, autoimmune disorders, disorders related to
hyperimmune activity, inflammatory conditions, disorders related to
aberrant acute phase responses, hypercongenital conditions, birth
defects, necrotic lesions, wounds, organ transplant rejection, renal
diseases, ischaemia-reperfusion injury, heart disorders, disorders
related to aberrant signal transduction, proliferation disorders,
cancers, HIV infection, asthma, cystic fibrosis, pulmonary fibrosis,
ulcerative colitis, cerebral infarct, myocardial infarct, diabetic
nephropathy, allergic rhinitis, Crohn's disease, atherosclerosis,
rheumatoid arthritis, inflammatory/autoimmune disorders, glioblastoma,
CC pneumonia small cell undifferentiated carcinoma, carcinoma of the breast,
CC colon, lung, ovary, pancreas, prostate, non-Hodgkin's lymphoma, disorders
CC associated with aberrant cell adhesion, I-CAM function and/or regulation,
CC E-selectin function and/or regulation, or aberrant NF-kB function and/or
CC regulation (all claimed).

XX
XX Detecting pancreatic cancer-associated transcript in a biological sample,
XX useful for diagnosing or treating the disease, comprises contacting the
XX sample with a polynucleotide that selectively hybridizes to a specific
XX sequence.
XX
XX Claim 7; SEQ ID NO 9; 263pp; English.
XX
XX The present invention describes a method for detecting a pancreatic
XX cancer-associated transcript in a biological sample. The method comprises
XX contacting the biological sample with a polynucleotide that selectively
XX hybridizes to a sequence at least 80% identical to a sequence as shown in
XX any one of Tables 3 to 25 in the specification or having the GenBank
XX Accession Number AF279145. Also described: (1) diagnosing pancreatic
XX cancer in a human or animal subject being tested, determining the
XX likelihood that a subject having a pancreatic cancer will survive, or
XX determining the suitability of a subject having a pancreatic cancer for
XX surgical resection therapy; (2) detecting a pancreatic cancer-associated
XX polypeptide in a biological sample; (3) determining the likelihood that a
XX subject having a pancreatic cancer will survive; and (4) monitoring the
XX efficacy of a therapeutic treatment of pancreatic cancer. A pancreatic
XX cancer-associated transcript has cytostatic activity, and can be used in
XX gene and protein therapy. A pancreatic cancer-associated transcript
XX polynucleotide, a vector comprising the polynucleotide, an isolated
XX polypeptide or an antibody that binds to the isolated polypeptide can be
XX used for diagnosing or prognosing pancreatic cancer or for preparing a
XX medicament for the treatment of pancreatic cancer. The prognostic or
XX diagnostic methods are useful for the early detection of pancreatic
XX cancer or its metastases, and for monitoring the progress of disease such
XX as during remission or following surgery or chemotherapy. The present
XX sequence encodes human retinoic acid induced 3 (RAI3), which is used in
XX the exemplification of the present invention.

XX cancer, comprises detecting and blocking the over expression of a gene of  
XX a protein found in breast, lung, colon, or kidney tissue.  
XX PS Claim 2; SEQ ID NO 2; 220pp; English.  
XX CC The present invention describes a method for diagnosing and treating a  
CC cancer, e.g. breast, lung, colon, or kidney cancer. The method comprises  
CC detecting and blocking the over expression of a gene of a protein found  
CC in breast, lung, colon, or kidney tissue. Also described is an antibody  
CC or binding portion of an antibody that specifically binds a protein found  
CC in breast tissue, lung tissue, colon tissue, or kidney tissue. The  
CC antibody has cytostatic activity, and can be used in gene therapy. The  
CC methods, antibodies, polynucleotides and polypeptides from the present  
CC invention are useful for detecting, diagnosing, preventing and treating  
CC cancer, e.g. breast, lung, colon, or kidney cancer. The present sequence  
CC represents a nucleotide sequence given in the present invention, which is  
CC over expressed in human breast tumour tissue. N.B. All 385 sequences  
CC referenced in this patent are detailed in the US provisional application  
CC SN 60/447,900, filed 02/13/2003. In this application only one sequence,  
CC representing the longest sequence of each of the 65 clones is listed in  
CC Appendix A (and given as SEQ ID NO:1 to 65 in the Sequence Listing).

XX PT New nucleic acid, and derived proteins, useful for diagnosis of bronchial  
XX cancer and in screening for therapeutic and diagnostic agents.  
XX PS Claim 1; SEQ ID NO 350; 1381pp; German.  
XX CC This invention relates to a novel isolated nucleic acid associated with  
CC bronchial cancer comprising 489 defined sequences given in the  
CC specification. The invention may be useful for the production of  
CC compounds with a cytostatic activity through the inhibition of expression  
CC or activity of tumour-associated proteins. The novel DNA sequences and  
CC the proteins/peptides encoded by them are used for detecting bronchial  
CC cancer or determining the risk of developing it and to screen for  
CC specific binding partners of the DNA or protein sequences, where the  
CC binding partners are potentially useful as agents for treating or  
CC diagnosing bronchial cancer. The DNA or protein sequences can also be  
CC used for prognosis, detection of metastases and for secondary treatment  
CC (of tumours that have been stabilised or are no longer detectable).  
CC Detecting abnormal expression of the DNA sequences provides early  
CC diagnosis of bronchial cancers. The present sequence is that of a novel  
CC bronchial cancer-associated human gene sequence of the invention.

XX
XX Novel isolated antibody capable of binding to tumor-associated antigenic
XX target polypeptide, useful for treating cell proliferative disorder e.g.
XX cancer.
XX
XX Claim 1; SEQ ID NO 40; 337pp; English.
XX
XX The invention relates to a novel isolated antibody binding to a
XX polypeptide having at least 80% sequence identity to a polypeptide having
XX any one of 76 fully defined 182-910 amino acid tumor-associated antigenic
XX target polypeptide (TAT) sequences (AEA00127-AEA00202) given in the
XX specification, a polypeptide having any one of (AEA00127-AEA00202),
XX lacking its associated signal peptide, or an extracellular domain of a
XX polypeptide having any one of (AEA00127-AEA00202). The polypeptide is
XX encoded by the nucleotide sequence having any one of (AEA00049-AEA00126).
XX An antibody of the invention has cytostatic activity. The antibody is
XX useful for inhibiting growth of a cell expressing TAT188, which involves
XX contacting the cell with the antibody. The cell is a cancer cell chosen
XX from breast, colon, rectum, endometrium, kidney, lung, ovary, skin and
XX liver cell. The cancer cell is a mammalian cell, preferably a human cell.
XX The antibody is also useful for detecting the level of TAT188
XX polypeptide expressed in a test cell relative to a control cell, and for
XX detecting the level of TAT188 polypeptide or a polypeptide having at
XX least 80 % sequence identity to the TAT188 polypeptide sequence in a test
XX cell relative to a control cell. The antibody is useful for treating a
XX preventing a cell proliferative disorder associated with increased
XX expression or activity of a polypeptide having at least 80 % identity to
XX a TAT188 polypeptide sequence. The cell proliferative disorder is cancer.
XX The method of the invention is useful for inhibiting the growth of a
XX cancer cell. The present sequence encodes a polypeptide of the invention.

XX
XX Novel isolated antibody e.g. anti-E16 or anti-TAT112 antibody that binds
XX to tumor-associated antigenic target polypeptide, useful for diagnosing
XX or treating cancer.
XX
XX Claim 1; SEQ ID NO 40; 96pp; English.
XX
XX This invention relates to a novel isolated antibody, for example anti-E16
XX or anti-TAT112 antibody, that binds to a tumor-associated antigenic
XX target polypeptide (TAT) and that lacks an associated signal peptide
XX sequence. The invention may be useful for the development of compounds
XX with a cytostatic activity acting as antagonists of the TAT188
XX polypeptide or RNA interference whilst the disclosed sequences may be
XX useful for gene therapy. The invention is useful for inducing the death
XX of a cell (such as a cancer cell chosen from breast, colon, rectum,
XX endometrium, kidney, lung, ovary, skin and liver) to which it binds,
XX inhibiting proliferation or promoting cell death of a cell expressing
XX TAT188. In addition, the invention may be useful for detecting the level
XX of TAT188 polypeptide in a test cell relative to a control cell, or
XX treating or preventing a cell proliferative disorder associated with
XX increased expression of TAT188. The novel antibody of the invention is
XX useful for inhibiting the growth of a cancer cell and may be useful for
XX diagnosing or treating cancer. The present sequence is that of the human
XX TAT115 cDNA which encodes a protein against which an antibody of the
XX invention may be targeted.

XX  
XX CC The invention relates to 2175 novel human ovarian antigens (ABP41054-  
XX CC ABP43228) and to cDNAs encoding them (ABQ54131-ABQ56305), and also  
XX CC encompasses polypeptides 90% identical and polynucleotides 95% identical  
XX CC to the sequences of the invention. The invention additionally relates to  
XX CC recombinant vectors and host cells comprising human ovarian antigen  
XX CC polynucleotides, antibodies against human ovarian antigens, and the use  
XX CC of ovarian antigen polynucleotides and polypeptides in diagnosing,  
XX CC treating, prognosing or preventing various ovary and/or breast-related  
XX CC disorders. Such conditions include ovarian cancer and breast cancer, and  
XX CC metastatic tumours of ovarian or breast origin, reproductive system  
XX CC disorders (e.g., infertility, disorders of pregnancy, anovulation,  
XX CC polycystic ovary syndrome, ovarian cysts, and dysmenorrhea), endocrine  
XX CC disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic  
XX CC vaginitis), immune disorders (e.g., congenital and acquired  
XX CC immunodeficiencies, autoimmune oophoritis, systemic lupus erythematosus),  
XX CC blood-related disorders (e.g., anaemia), cardiovascular disorders,  
XX CC respiratory disorders, neurological disorders, gastrointestinal disorders

CC and urinary system disorders. Ovarian antigen polypeptides and  
CC polynucleotides may also be used in screening for compounds which  
CC modulate ovarian antigen expression or activity. The polynucleotides may  
CC further be used for gene therapy, chromosome mapping, in the  
CC identification of individuals and in forensic analysis, and the  
CC polypeptides may be used as food additives or to prepare antibodies  
CC useful in disease diagnosis, drug targeting and phenotyping. The present  
CC sequence represents cDNA encoding a human ovarian antigen of the  
CC invention. Note: The sequence data for this patent did not form part of  
CC the printed specification, but was obtained in electronic format directly  
CC from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

XX PT New nucleic acid differentially expressed in pancreatic tumor tissue, for
XX PT use as diagnostic agents and in screening for therapeutic agents.
XX PS Claim 1; SEQ ID NO 42; 28pp; German.
XX CC The invention relates to a novel human nucleic acid sequence of the
XX CC pancreas and its encoded protein. The invention further comprises:
XX CC proteins and peptides, preferably isolated, that contain a sequence
XX CC encoded by the novel nucleic acid; and methods for diagnosis and
XX CC treatment of pancreatic cancer, using a substance that inhibits or binds
XX CC to the protein or its DNA, including: an antisense oligonucleotide, short
XX CC interfering RNA or ribozyme directed against the pancreatic protein, an
XX CC organic molecule, particularly having a molecular weight below 5000,
XX CC especially 300, that binds to the pancreatic DNA, an aptamer or
XX CC (monoclonal) antibody, preferably human or humanized, that binds to the
XX CC pancreatic DNA, or an anti-idiotypic antibody raised against the
XX CC monoclonal antibody, any of which may be derivatized with a reporter
XX CC group, cytotoxic compound, immunostimulant and/or radioisotope. The novel
XX CC human pancreatic proteins and their encoding DNA have cytostatic
XX CC activity. The novel sequences are useful for inhibiting transcription
XX CC and/or expression of genes and proteins associated with pancreatic
XX CC cancer. This polynucleotide sequence represents the DNA encoding one of
XX CC the novel human pancreatic proteins of the invention. Note: This sequence
XX CC is not shown in the specification, it has been electronically downloaded
XX CC from a DVD-rom provided with this specification by the European Patent
XX CC Office.

XX PT Transformation of cells with a fusion protein of an orphan receptor
XX PT protein with a fluorescent protein useful for identification of ligands
XX PT to the orphan receptor.
XX PS Example 4; SEQ ID NO 196; 594pp; Japanese.
XX CC This invention relates to a novel method of identifying ligands to an
XX CC orphan receptor protein which comprises transforming cells with DNA
XX CC encoding a fusion protein of the orphan receptor with a fluorescent
XX CC protein, so that the fusion protein is expressed in the cells (or cell
XX CC membranes isolated from them) and contacting the cells with the potential
XX CC ligand to be tested. A suitable fluorescent protein for incorporation in
XX CC the fusion protein is green fluorescent protein (GFP), for example GFP-I,
XX CC wild-type GFP, GFPuv or Enhanced GFP (EGFP). The method is useful for the
XX CC identification of ligands binding to an orphan receptor protein.

XX Primer sets for synthesizing polynucleotides, particularly the 5602 full-
PT length cDNAs defined in the specification, and for the detection and/or
PT diagnosis of the abnormality of the proteins encoded by the full-length
PT cDNAs.
XX
XX Claim 1; SEQ ID NO 5189; 2537pp + Sequence Listing; English.
XX
XX The present invention describes primer sets for synthesizing 5602 full-
CC length cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the
CC complementary strand of a polynucleotide which comprises one of the 5602
CC nucleotide sequences defined in the specification, where the
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprising a sequence complementary to the
CC complementary strand of a polynucleotide which comprises a 5'-end
CC sequence and an oligonucleotide comprising a sequence complementary to a
CC polynucleotide which comprises a 3'-end sequence, where the
CC oligonucleotide comprises at least 15 nucleotides and the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC specification. The primer sets can be used in antisense therapy and in
CC gene therapy. The primers are useful for synthesizing polynucleotides,
CC particularly full-length cDNAs. The primers are also useful for the
CC detection and/or diagnosis of the abnormality of the proteins encoded by
CC the full-length cDNAs. The primers allow obtaining of the full-length
CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
CC represent human amino acid sequences; and AAH13629 to AAH13632 represent
CC polynucleotides, all of which are used in the exemplification of the
CC present invention

XX
XX New nucleic acid molecule encoding a human G-protein coupled receptor,
PT RAI3, useful for preventing, treating or ameliorating chronic obstructive
PT pulmonary disease (COPD), COPD-like disorder, or the underlying symptoms
PT of COPD.
XX
XX Disclosure; SEQ ID NO 33; 301pp; English.
XX
XX The present sequence is that of DNA encoding a peptide corresponding to
CC amino acids 340-353 of a human G-protein coupled receptor, denoted
CC retinoic acid induced 3 (RAI-3) protein ADI28460. The peptide was
CC identified in studies of RAI-3 phosphorylation in response to cigarette
CC smoke. Primers based on this sequence can be used in a PCR to identify
CC individuals at risk for developing chronic obstructive pulmonary disease
CC (COPD). RAI-3 is tyrosine phosphorylated and/or is associated/complexed
CC with tyrosine phosphorylated proteins only in cells that have been
CC exposed to cigarette smoke. Since RAI-3 is primarily expressed in lung
CC tissue, and since cigarette smoke is a major causative factor of COPD,
CC RAI-3 provides a novel cellular target for identifying modulators, e.g.
CC agonists or antagonists, useful for the treatment and/or prevention of
CC COPD and related disorders such as emphysema and chronic bronchitis. RAI-
CC 3 modulators, e.g. agonists and antagonists, especially antisense
CC compounds, can be used to treat COPD and other disorders or diseases
CC associated with regulation of NF-kB and/or its associated or interacting
CC signaling molecules. Single nucleotide polymorphisms (SNPs) detected in
CC the RAI-3 gene are useful for determining COPD association in
CC individuals. RAI-3 nucleic acid molecules and polypeptides are useful for
CC preventing, treating or ameliorating disorders related to aberrant GPCR
CC signaling or cell cycle regulation, pulmonary disorders, inflammatory
CC lung disorders, COPD, the underlying symptoms of COPD, COPD-related
CC disorders or conditions, autoimmune disorders, disorders related to
CC hyperimmune activity, inflammatory conditions, disorders related to
CC aberrant acute phase responses, hypercongenital conditions, birth
CC defects, necrotic lesions, wounds, organ transplant rejection, renal
CC diseases, ischaemia-reperfusion injury, heart disorders, disorders
CC related to aberrant signal transduction, proliferation disorders,
CC cancers, HIV infection, asthma, cystic fibrosis, pulmonary fibrosis,
CC ulcerative colitis, cerebral infarct, myocardial infarct, diabetic
CC nephropathy, allergic rhinitis, Crohn's disease, atherosclerosis,
CC rheumatoid arthritis, inflammatory/autoimmune disorders, glioblastoma,
CC pulmonary small cell undifferentiated carcinoma, carcinoma of the breast,
CC colon, lung, ovary, pancreas, prostate, non-Hodgkin's lymphoma, disorders
CC associated with aberrant cell adhesion, I-CAM function and/or regulation,
CC E-selectin function and/or regulation, or aberrant NF-kB function and/or
CC regulation (all claimed).

XX
XX Novel Japanese-encephalitis-virus antigen comprising Japanese-
XX encephalitis-virus-like particle consisting of M and E protein, useful as
XX Japanese-encephalitis vaccine.
XX
XX Claim 3; SEQ ID NO 4; 45pp; Japanese.
XX
XX The invention relates to a novel Japanese-encephalitis-virus antigen
XX comprising a Japanese-encephalitis-virus-like particle, which includes
XX the M protein and E protein of a Japanese encephalitis virus, and which
XX does not contain RNA in the particle, and shows haemagglutination
XX activity. The invention further comprises: a transformed cell obtained by
XX providing cDNA encoding the E protein and prM protein prepared from the
XX genome RNA of a Japanese-encephalitis virus, preparing a recombinant DNA
XX by integrating the cDNA in an expression vector which contains a beta-
XX actin promoter and which can be expressed, transforming an animal cell by
XX the recombinant DNA, selecting the transformed cell from a parent cell
XX and making the transformed cell to acclimatize in serum free medium;
XX Japanese-encephalitis-vaccine having immunity for the novel antigen and
XX containing the antigen as an active ingredient; and a diagnostic agent
XX which contains the antigen as an active ingredient. The Japanese-
XX encephalitis-virus antigen is useful for carrying out the preparation of
XX a Japanese-encephalitis vaccine and a diagnostic agent. This
XX polynucleotide sequence represents the Japanese-encephalitis-virus
XX encoding DNA of the invention.

XX contg. DNA from flavi-virus e.g. Japanese encephalitis and yellow fever
XX virus, used as vaccine.
XX
XX Example 9; Fig 17; 117pp; English.
XX
XX cDNA was prepared from genomic virion RNA obtained from suspension
XX cultures of C6/36 cells infected with a passage 55 suckling mouse brain
XX stock of the Nagayama strain of JEV. EcoRI linkers were ligated to the
XX cDNA fragments for cloning into pBR322. Recombinant plasmids were
XX transformed into E.coli DH5 cells. Plasmid pC20 contained 81 non-coding
XX nucleotides and the coding regions for C and prM. Sequence AAQ22767 is
XX that of the C coding region of pC20, combined with an updated sequence of
XX the prM, E, NS1, NS2A and NS2B coding regions of the Nagayama strain. The
XX sequence begins at the C protein Met initiation codon. A subfragment of
XX pC20 was cloned into pUC18 to give pDr20. This plasmid was then used in
XX the construction of novel recombinants JEV24, JEV27, JEV33 and JEV34.
XX These were transfected into VP410 infected cells to generate VP825,
XX VP829, VP857 and VP864, respectively

XX Increasing amount of antigen produced from DNA vaccine, by administering
XX DNA vaccine using needle-less syringe, which produce increased amount of
XX antigen than produced by administering DNA vaccine using usual syringe
XX with needle.
XX
XX Example; SEQ ID NO 1; 22pp; Japanese.
XX
XX The invention relates to a novel method for increasing the amount of
XX antigen produced from a DNA vaccine. The method comprises administering
XX the DNA vaccine using a needle-less syringe, whereby using such a syringe
XX the amount of antigen produced is increased when compared to the amount
XX of antigen produced by administering DNA vaccine using a syringe with a
XX needle. The DNA vaccine is administered by an intramuscular route. The
XX method of the invention may be useful for increasing the amount of
XX antigen produced from a DNA vaccine. The current sequence is that of the
XX pcJEME DNA of the invention which comprises the Japanese encephalitis
XX virus strain Nakayama prM/E gene in the pcDNA3 vector.

XX Predicting toxic effects of compounds or the progression of these toxic
PT effects by determining the changes in gene expression in tissues or cells
PT exposed to the toxin and comparing these to gene expression in unexposed
PT tissues or cells.
XX
XX Claim 1; SEQ ID NO 76; 239pp; English.
XX
XX The invention relates to methods for predicting toxic effects of
CC compounds or the progression of these toxic effects by determining the
CC global changes in gene expression in tissues or cells exposed to the
CC toxin and comparing these to gene expression in unexposed tissues or
CC cells. Also included are methods of predicting at least one toxic effect
CC of a compound or progression of a toxic effect, preferably the
CC hepatotoxicity of a compound, comprising detecting the level of
CC expression in a tissue or cell sample exposed to the compound of two or
CC more genes listed in the specification, where differential expression of
CC the genes is indicative of at least one toxic effect or progression. The
CC method can also be used to identify an agent which modulates the toxic
CC response and predict cellular pathways that a compound modulates in a
CC cell. The methods utilise a set of at least two probes (on a solid
CC support in kit form), where each of the probes comprises a sequence that
CC specifically hybridises to a gene listed in the specification, a computer
CC system comprising a database containing information identifying the
CC expression level in a tissue or cell sample exposed to a hepatotoxin of a
CC set of genes comprising at least two genes listed in the specification,
CC and a user interface to view the information used to present information
CC identifying the expression level in a tissue or cell of at least one gene
CC listed in the specification. The method is useful for elucidating global
CC changes in gene expression and for identifying toxicity markers in
CC tissues or cell exposed to a known toxin. The genes may be used as
CC toxicity markers in drug screening and toxicity assays. The genes and
CC gene expression information may be used as diagnostic markers for the
CC prediction or identification of the physiological state of tissue or cell
CC sample that has been exposed to a compound or agent. Hepatotoxicity is
CC characterised by centrilobular necrosis and steatosis. The present
CC sequence is an expressed sequence tag (EST) or cDNA derived from a gene
CC which is differentially expressed in response to a hepatotoxic agent

PT markers in liver tissues or cells for drug screening and toxicity assays,
PT comprises preparing gene expression profile of tissue or cells exposed to
PT the compound.
XX
XX Claim 1; SEQ ID NO 181; 1156pp; English.
XX
XX The present invention relates to a method for predicting a toxic effect
CC of a compound. The method comprises preparing a gene expression profile
CC of a tissue or cell sample exposed to the compound, and comparing the
CC gene expression profile to a database comprising SEQ ID 1-4925, where
CC differential expression of the gene indicates at least one toxic effect.
CC The method is useful for predicting at least one toxic effect of a
CC compound, predicting hepatotoxicity or the progression of a toxic effect
CC of a compound, identifying an agent that modulates the onset or
CC progression of a toxic response, predicting the cellular pathways that a
CC compound modulates in a cell, and identifying an agent that modulates at
CC least one activity of a protein. The method and compositions of the
CC present invention using a database of genes having liver toxin-induced
CC differential expression, are useful in identifying toxicity markers in
CC liver tissues or cells for drug screening and toxicity assays. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences.

PI WPI; 2003-731472/69.

XX Determining if a compound induces a toxic effect on a tissue or cell, for  
PT identifying hepatotoxic compounds, comprises comparing a gene expression  
PT profile of a tissue or cell sample to a database of Tox mean and non-Tox  
PT mean values.

XX Claim 44; SEQ ID NO 218; 874pp; English.

XX The present invention describes a method for determining whether a  
CC compound induces a toxic effect on a tissue or cell. The method comprises  
CC preparing a gene expression profile of a tissue or cell sample exposed to  
CC the compound, and comparing the gene expression profile to a database  
CC comprising data or information on the Tox mean and non-Tox mean value.  
CC The method is useful for predicting or identifying at least one toxic  
CC effect, particularly hepatotoxicity, of a test or unknown compound. The  
CC genes listed in the specification are useful as diagnostic or toxicity  
CC markers for the prediction or identification of the physiological state  
CC of tissue or cell sample that has been exposed to a compound, or to  
CC identify or predict the toxic effects of a compound or an agent. These  
CC may also be used as markers for monitoring toxicity progression or for  
CC drug screening. The present sequence represents a primary rat hepatocyte  
CC toxicity modelling related gene sequence from the present invention.

XX
XX Combination for diagnosing, staging, treating, or monitoring the
PT progression of treatment of a vascular disease, e.g. atherosclerosis,
PT comprises several cDNAs that are differentially expressed in activated
PT vascular tissue.
XX
XX Claim 1; Page; 18pp; English.
PS
XX This invention relates to a combination comprising several cDNAs that are
CC differentially expressed in activated vascular tissue. The invention also
CC discloses a high throughput method for detecting differentially expressed
CC cDNAs in a sample. The cDNAs of the invention may have
CC antiarteriosclerotic; cytostatic; cardiac; hypotensive; antidiabetic;
CC gynaecological; vasotropic and cerebroprotective activities and may be
CC used in gene therapy. The cDNAs of the invention may be used in a high-
CC throughput methods for detecting differential expression of one or more
CC cDNAs in a sample, or screening several molecules or compounds to
CC identify a molecule or compound that specifically binds a cDNA of the
CC invention. A protein encoded by the cDNA may be used to screen several
CC molecules or compounds to identify a ligand that specifically binds to
CC the protein, or to produce or purify an antibody to the protein that can
CC be used to detect a protein in a sample or purify a natural or
CC recombinant protein from a sample. The nucleotides may be useful for
CC diagnosing, staging, treating, or monitoring the progression of treatment
CC of a vascular disease, e.g. atherosclerosis, cancer, coronary artery
CC disease, hypertension, diabetes, pre-eclampsia, ischaemia- reperfusion
CC injury, retinosis, or stroke. The cDNAs can also be used for large-scale
CC genetic or gene expression analysis of several new nucleic acid
CC molecules. Antibodies to the proteins encoded by the cDNAs are useful for
CC diagnosing pre-pathologic disorders, and chronic or acute diseases
CC associated with abnormalities in the expression, amount or distribution
CC of the protein. The present sequence represents a cDNA of the invention
CC that is differentially expressed in activated vascular tissue. Note: The
CC sequence data for this patent did not form part of the specification, but
CC was obtained in electronic format directly from USPTO at
CC http.seqdata.uspto.gov/sequence.html?DocID=20020137081

XX PT New genes regulated by MYCN activation, useful in gene therapy,
PT particularly for treating a subject with e.g. neuroblastoma or other
PT cancers, or for diagnosing, staging or monitoring the treatment of the
PT cancer.
XX
XX Claim 1; SEQ ID NO 304; 27pp; English.
PS
XX This invention relates to novel isolated cDNAs that are differentially
CC expressed in MYCN activated cells. Specifically, it refers to
CC polynucleotide sequences that exhibit differential expression patterns in
CC cells activated by the transactivator MYCN, where MYCN is a proto-
CC oncogene that is amplified in neuroblastoma cells and is common in small
CC cell lung cancers. The present invention describes these cDNA molecules
CC as useful for in hybridisation assays to detect expression of nucleic
CC acids (or complementary nucleic acids) in a present in a given sample, as
CC well as for screening assays by identifying molecules or compounds that
CC specifically bind the cDNA as a ligand and modulate function or activity.
CC Accordingly, these compositions exhibit cytostatic activity and can also
CC be used for gene therapy purposes. This polynucleotide sequence is a cDNA
CC that is differentially expressed in MYCN activated cells, given in an
CC exemplification of the invention. NOTE: This sequence does not appear in
CC the printed specification but has been obtained in electronic format from
CC the US Patent Office at
CC ftp.seqdata.uspto.gov/sequence.html?DocID=20030119009.

XX
XX New connective tissue-related polypeptides and polynucleotides, useful
XX for treating, preventing and/or prognosing e.g. disorders of connective
XX tissue, (e.g. rheumatoid arthritis), cancers, cancer metastases and/or
XX neoplasias.
XX
XX Disclosure; SEQ ID NO 1315; 248pp; English.
XX
XX The invention describes an isolated nucleic acid molecule (I), which
XX comprises a sequence that is at least 95 % identical to a connective
XX tissue-related polynucleotide encoding connective tissue antigens (CTA).
XX The polypeptide or polynucleotide is useful for preventing, treating, or
XX ameliorating medical conditions in a mammal. The connective tissue
XX polypeptides, polynucleotides and antibodies are particularly useful for
XX treating, preventing and/or prognosing disorders of connective tissues
XX (e.g. rheumatoid arthritis, discoid and systemic lupus erythematosus,
XX scleroderma, or Sjogren's syndrome), cancers, cancer metastases and/or
XX neoplasias (e.g. leukaemia), neurodegenerative disorders (e.g.
XX Alzheimer's disease, or Parkinson's disease), cardiovascular diseases
XX (e.g. atherosclerosis, myocarditis or cardiopulmonary bypass
XX complications), autoimmune diseases (e.g. systemic lupus erythematosus,
XX rheumatoid arthritis, or multiple sclerosis), allergic reactions (e.g.

XX (HUMA-) HUMAN GENOME SCI INC.
PA Rosen CA, Barash SC, Ruben SM;
XX WPI; 2001-565190/63.
XX Nucleic acid encoding novel connective tissue associated polypeptides,
PT used in diagnosing, preventing, treating or ameliorating a disorder such
PT as cancer or rheumatoid arthritis.
XX Disclosure; SEQ ID NO 1313; 673pp; English.
XX The present invention relates to the isolation of novel human connective
CC tissue related polypeptides (AAU86435-AAU86923) and the polynucleotide
CC (cDNA and genomic) sequences encoding them. The sequences of the
CC invention are useful in the diagnosis, treatment, prevention and/or
CC prognosis of diseases associated with connective tissue(s), including
CC cancer. The polynucleotide sequences of the invention are also useful in
CC gene therapy. ABK42102-ABK43116 represent genomic sequences encoding the
CC novel human connective tissue related polypeptides. Note: The sequence
CC data for this patent did not form part of the printed specification, but
CC was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

XX (HUMA-) HUMAN GENOME SCI INC.

XX Rosen CA, Ruben SM, Barash SC;

XX WPI; 2003-634869/60.

DR P-PSDB; ADB59454.

XX New connective tissue-related polypeptides and polynucleotides, useful  
PT for treating, preventing and/or prognosing e.g. disorders of connective  
PT tissue, (e.g. rheumatoid arthritis), cancers, cancer metastases and/or  
PT neoplasias.

XX Disclosure; SEQ ID NO 1313; 248pp; English.

XX The invention describes an isolated nucleic acid molecule (I), which  
XX comprises a sequence that is at least 95 % identical to a connective  
XX tissue-related polynucleotide encoding connective tissue antigens (CTA).  
XX The polypeptide or polynucleotide is useful for preventing, treating, or  
XX ameliorating medical conditions in a mammal. The connective tissue  
XX polypeptides, polynucleotides and antibodies are particularly useful for  
XX treating, preventing and/or prognosing disorders of connective tissues  
XX (e.g. rheumatoid arthritis, discoid and systemic lupus erythematosus,  
XX scleroderma, or Sjogren's syndrome), cancers, cancer metastases and/or  
XX neoplasias (e.g. leukaemia), neurodegenerative disorders (e.g.  
XX Alzheimer's disease, or Parkinson's disease), cardiovascular diseases  
XX (e.g. atherosclerosis, myocarditis or cardiopulmonary bypass  
XX complications), autoimmune diseases (e.g. systemic lupus erythematosus,  
XX rheumatoid arthritis, or multiple sclerosis), allergic reactions (e.g.

XX
XX New isolated nucleic acid detection reagent for detecting 1000 or more
PT genes from Drosophila and for elucidating cell signaling and cell-cell
PT interactions.
XX
PS Claim 1; SEQ ID NO 2701; 21pp + Sequence Listing; English.
XX
CC The invention relates to an isolated nucleic acid detection reagent
CC capable of detecting 1000 or more genes from Drosophila. The invention is
CC useful in developmental biology and in elucidating cell signalling and
CC cell-cell interactions in higher eukaryotes for the development of
CC insecticides, therapeutics and pharmaceutical drugs. The invention
CC discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
CC sequences (ABL01840-ABL6175) and the encoded proteins (ABBS57737-
CC ABB72072). The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT
```

```
XX
PS Claim 1; SEQ ID NO 20939; 71pp + Sequence Listing; English.
XX
XX The present sequence is one of a large number of 5' ESTs derived from
CC mRNAs encoding secreted proteins. No ORF has yet been conclusively
CC identified within the present sequence. The 5' ESTs were prepared from
CC total human RNAs or polyA+ RNAs derived from 30 different tissues. EST
CC sequences usually correspond mainly to the 3' untranslated region (UTR)
CC of the mRNA because they are often obtained from oligo-dT primed cDNA
CC libraries. Such ESTs are not well suited for isolating cDNA sequences
CC derived from the 5' ends of mRNAs and even in those cases where longer
CC cDNA sequences have been obtained, the full 5' UTR is rarely included. 5'
CC ESTs are derived from mRNAs with intact 5' ends and can therefore be used
CC to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in
CC diagnostic, forensic, gene therapy and chromosome mapping procedures.
CC They are used to obtain upstream regulatory sequences and to design
CC expression and secretion vectors

XX
XX New recombinant DNA construct comprising a promoter positioned to provide
XX for expression of a polynucleotide encoding a polypeptide from a
XX microbial source, useful for producing plants with improved properties.
XX
XX Claim 1; SEQ ID NO 36568; 122pp; English.
XX
XX The invention relates to a recombinant DNA construct comprising a
XX promoter functional in a plant cell, where the promoter is positioned to
XX provide for expression of a polynucleotide encoding a polypeptide from a
XX microbial source. The invention also relates to a transformed plant
XX comprising the recombinant DNA construct and a method of producing a
XX transformed plant having an improved property. The plant is a crop plant
XX such as maize or soybean. The method of producing a transformed plant
XX having an improved property comprises transforming a plant with the
XX recombinant DNA construct and growing the transformed plant, where the
XX polynucleotide or polypeptide is useful for improving plant properties.
XX The recombinant DNA construct is useful for producing plants with
XX improved plant properties, e.g. improved cold, heat or drought tolerance,
XX tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
XX increased resistance to plant disease, better growth rate by modification
XX of the cell cycle pathway with plant growth regulators, increased rate of
XX homologous recombination, modified seed oil or protein yield and/or
XX content, improved yield by modification of carbohydrate, nitrogen or by
XX phosphorus use and/or uptake, by modification of photosynthesis or by
XX providing improved plant growth and development under at least one stress
XX condition, improved lignin production or improved galactomannan
XX production. This sequence represents a bacterial polynucleotide used in
XX the scope of the invention. Note: The sequence data for this patent did
XX not form part of the printed specification but was obtained in electronic
XX format from USPTO at seqdata.uspto.gov/sequence.html.

XX
XX Novel isolated nucleic acid molecules (markers) overexpressed in ovarian
XX cancer cells as compared to their normal non-cancerous ovarian cells are
XX used to characterize stage, grade, histological type of ovarian cancer.
XX
XX Disclosure; SEQ ID NO 3621; 106pp; English.
XX
XX The invention relates to nucleic acid markers which are overexpressed in
XX ovarian cancer cells as compared to their expression in normal (i.e. non-
XX cancerous) ovarian cells. The invention also relates to polypeptides
XX encoded by the markers, antibodies that selectively bind to the
XX polypeptides, a method of inhibiting ovarian cancer in a patient at risk
XX of developing ovarian cancer involving inhibiting expression of a gene
XX corresponding to a marker of the invention and a method of treating a
XX patient afflicted with ovarian cancer comprising providing to cells of
XX the patient an antisense oligonucleotide complementary to a marker of the
XX invention. The markers are useful for assessing if a patient is afflicted
XX with ovarian cancer, which involves comparing the level of expression of
XX a marker in a patient sample and a normal level of expression of the
XX marker in a control non-ovarian cancer sample. A difference between the
XX expression levels indicates ovarian cancer. The level of expression of a
XX marker corresponds to a secreted protein or to a transcribed
XX polynucleotide or its portion. The level of expression of the marker is
XX assessed by detecting the presence in the sample, a protein or protein
XX fragment corresponding to the marker. The presence of protein or protein
XX fragment is detected using an antibody that specifically binds with the
XX protein or protein fragment. Alternatively, the level of expression of
XX the marker is assessed by detecting the presence of a transcribed
XX polynucleotide which anneals with the marker or anneals with a portion of
XX the polynucleotide comprising the marker under stringent conditions. The
XX marker is also used for monitoring the progression of ovarian cancer in a
XX patient which involves detecting expression of the marker in a patient
XX sample at a first point in time, repeating the method at a subsequent
XX time and comparing the level of expression. The method is carried out
XX using an ovarian tissue sample. A composition comprising a marker,
XX polypeptide or antibody of the invention is used to treat ovarian cancer.
XX This sequence represents a human ovarian cancer DNA marker of the
XX invention. Note: The sequence data for this patent did not form part of
XX the printed specification, but was obtained in electronic format directly
XX from WIPO at ftp.wipo.int/pub/published_pct_sequences.

XX PT Novel isolated nucleic acid molecules (markers) overexpressed in ovarian  
XX PT cancer cells as compared to their normal non-cancerous ovarian cells are  
XX PT used to characterize stage, grade, histological type of ovarian cancer.  
XX PS Disclosure; SEQ ID NO 5769; 106pp; English.  
XX CC The invention relates to nucleic acid markers which are overexpressed in  
XX CC ovarian cancer cells as compared to their expression in normal (i.e. non-  
XX CC cancerous) ovarian cells. The invention also relates to polypeptides  
XX CC encoded by the markers, antibodies that selectively bind to the  
XX CC polypeptides, a method of inhibiting ovarian cancer in a patient at risk  
XX CC of developing ovarian cancer involving inhibiting expression of a gene  
XX CC corresponding to a marker of the invention and a method of treating a  
XX CC patient afflicted with ovarian cancer comprising providing to cells of  
XX CC the patient an antisense oligonucleotide complementary to a marker of the  
XX CC invention. The markers are useful for assessing if a patient is afflicted  
XX CC with ovarian cancer, which involves comparing the level of expression of  
XX CC a marker in a patient sample and a normal level of expression of the  
XX CC marker in a control non-ovarian cancer sample. A difference between the  
XX CC expression levels indicates ovarian cancer. The level of expression of a  
XX CC marker corresponds to a secreted protein or to a transcribed  
XX CC polynucleotide or its portion. The level of expression of the marker is  
XX CC assessed by detecting the presence in the sample, a protein or protein  
XX CC fragment corresponding to the marker. The presence of protein or protein  
XX CC fragment is detected using an antibody that specifically binds with the  
XX CC protein or protein fragment. Alternatively, the level of expression of  
XX CC the marker is assessed by detecting the presence of a transcribed  
XX CC polynucleotide which anneals with the marker or anneals with a portion of  
XX CC the polynucleotide comprising the marker, under stringent conditions. The  
XX CC marker is also used for monitoring the progression of ovarian cancer in a  
XX CC patient which involves detecting expression of the marker in a patient  
XX CC sample at a first point in time, repeating the method at a subsequent  
XX CC time and comparing the level of expression. The method is carried out  
XX CC using an ovarian tissue sample. A composition comprising a marker,  
XX CC polypeptide or antibody of the invention is used to treat ovarian cancer.  
XX CC This sequence represents a human ovarian cancer DNA marker of the  
XX CC invention. Note: the sequence data for this patent did not form part of  
XX CC the printed specification, but was obtained in electronic format directly  
XX CC from WIPO at [ftp.wipo.int/pub/published\\_pct\\_sequences](http://ftp.wipo.int/pub/published_pct_sequences).

XX CC The invention relates to human and mouse G protein-coupled receptors  
CC (GPCRs) and nucleic acids encoding them. The invention also relates to  
CC sequences at least 90% identical to the GPCR proteins and nucleic acids  
CC of the invention; methods of treating, preventing or diagnosing diseases  
CC associated with GPCRs of the invention; methods of screening for  
CC compounds useful in the treatment of GPCR-related diseases; a transgenic  
CC mouse comprising a GPCR gene of the invention; a mouse comprising a  
CC mutation in a GPCR transgene or in an endogenous GPCR gene; cells derived  
CC from the transgenic mice; kits comprising several mice, each of which has  
CC a mutation in a different GPCR gene of the invention; and kits comprising  
CC probes which hybridise to GPCR polynucleotides of the invention. The  
CC invention further discloses variants of the GPCR polypeptides and vectors  
CC comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may  
CC be used in the diagnosis, treatment or prevention of a wide variety of  
CC diseases including neurological disorders (e.g., Alzheimer's disease,  
CC depression, diabetic neuropathy, Parkinson's disease or schizophrenia);  
CC disorders of the adrenal gland; disorders of the colon or intestine  
CC (e.g., Crohn's disease, diarrhoea, food poisoning or irritable bowel  
CC syndrome); cardiovascular disorders (e.g., angina, cardiac arrhythmia or  
CC myocardial infarction); muscular disorders; blood disorders (e.g.,  
CC anaemia or leukaemia); immune disorders (e.g., autoimmune disorders or  
CC AIDS); bone and joint disorders (e.g., osteoarthritis, rheumatoid  
CC arthritis, gout or osteoporosis); metabolic or nutritive disorders (e.g.,  
CC obesity, enzyme deficiency-related diseases or vitamin deficiency-related  
CC diseases); and disorders of the kidney, liver, lung, breast, ovary,  
CC uterus, prostate, testis, skin, stomach, pancreas, spleen, thymus and  
CC thyroid (e.g., cancers). The present sequence represents a GPCR-encoding  
CC nucleic acid of the invention. Note: The full sequence data for this  
CC patent did not form part of the printed specification; those sequences  
CC not shown were obtained in electronic format directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences.

XX PT Novel isolated nucleic acid molecules (markers) overexpressed in ovarian  
PT cancer cells as compared to their normal non-cancerous ovarian cells are  
PT used to characterize stage, grade, histological type of ovarian cancer.  
XX PS Disclosure; SEQ ID NO 20633; 106pp; English.  
XX CC The invention relates to nucleic acid markers which are overexpressed in  
CC ovarian cancer cells as compared to their expression in normal (i.e. non-  
CC cancerous) ovarian cells. The invention also relates to polypeptides  
CC encoded by the markers, antibodies that selectively bind to the  
CC polypeptides, a method of inhibiting ovarian cancer in a patient at risk  
CC of developing ovarian cancer involving inhibiting expression of a gene  
CC corresponding to a marker of the invention and a method of treating a  
CC patient afflicted with ovarian cancer comprising providing to cells of  
CC the patient an antisense oligonucleotide complementary to a marker of the  
CC invention. The markers are useful for assessing if a patient is afflicted  
CC with ovarian cancer, which involves comparing the level of expression of  
CC a marker in a patient sample and a normal level of expression of the  
CC marker in a control non-ovarian cancer sample. A difference between the  
CC expression levels indicates ovarian cancer. The level of expression of a

CC marker corresponds to a secreted protein or to a transcribed  
CC polynucleotide or its portion. The level of expression of the marker is  
CC assessed by detecting the presence in the sample, a protein or protein  
CC fragment corresponding to the marker. The presence of protein or protein  
CC fragment is detected using an antibody that specifically binds with the  
CC protein or protein fragment. Alternatively, the level of expression of  
CC the marker is assessed by detecting the presence of a transcribed  
CC polynucleotide which anneals with the marker or anneals with a portion of  
CC the polynucleotide comprising the marker, under stringent conditions. The  
CC marker is also used for monitoring the progression of ovarian cancer in a  
CC patient which involves detecting expression of the marker in a patient  
CC sample at a first point in time, repeating the method at a subsequent  
CC time and comparing the level of expression. The method is carried out  
CC using an ovarian tissue sample. A composition comprising a marker,  
CC polypeptide or antibody of the invention is used to treat ovarian cancer.  
CC This sequence represents a human ovarian cancer DNA marker of the  
CC invention. Note: The sequence data for this patent did not form part of  
CC the printed specification, but was obtained in electronic format directly  
CC from WIPO at ftp.wipo.int/pub/published\_pct\_sequences.

XX PT Novel isolated nucleic acid molecules (markers) overexpressed in ovarian  
XX PT cancer cells as compared to their normal non-cancerous ovarian cells are  
XX PT used to characterize stage, grade, histological type of ovarian cancer.  
XX PS Disclosure; SEQ ID NO 20810; 106pp; English.  
XX CC The invention relates to nucleic acid markers which are overexpressed in  
XX CC ovarian cancer cells as compared to their expression in normal (i.e. non-  
XX CC cancerous) ovarian cells. The invention also relates to polypeptides

CC encoded by the markers, antibodies that selectively bind to the  
CC polypeptides, a method of inhibiting ovarian cancer in a patient at risk  
CC of developing ovarian cancer involving inhibiting expression of a gene  
CC corresponding to a marker of the invention and a method of treating a  
CC patient afflicted with ovarian cancer comprising providing to cells of  
CC the patient an antisense oligonucleotide complementary to a marker of the  
CC invention. The markers are useful for assessing if a patient is afflicted  
CC with ovarian cancer, which involves comparing the level of expression of  
CC a marker in a patient sample and a normal level of expression of the  
CC marker in a control non-ovarian cancer sample. A difference between the  
CC expression levels indicates ovarian cancer. The level of expression of a  
CC marker corresponds to a secreted protein or to a transcribed  
CC polynucleotide or its portion. The level of expression of the marker is  
CC assessed by detecting the presence in the sample, a protein or protein  
CC fragment corresponding to the marker. The presence of protein or protein  
CC fragment is detected using an antibody that specifically binds with the  
CC protein or protein fragment. Alternatively, the level of expression of  
CC the marker is assessed by detecting the presence of a transcribed  
CC polynucleotide which anneals with the marker or anneals with a portion of  
CC the polynucleotide comprising the marker, under stringent conditions. The  
CC marker is also used for monitoring the progression of ovarian cancer in a  
CC patient which involves detecting expression of the marker in a patient  
CC sample at a first point in time, repeating the method at a subsequent  
CC time and comparing the level of expression. The method is carried out  
CC using an ovarian tissue sample. A composition comprising a marker,  
CC polypeptide or antibody of the invention is used to treat ovarian cancer.  
CC This sequence represents a human ovarian cancer DNA marker of the  
CC invention.

XX PT New polynucleotide, useful in preparing a composition for diagnosing or

CC mammals. The invention also relates to nucleic acid and polypeptide  
CC sequences at least 80% identical to the TAT nucleic acids and  
CC polypeptides; expression vectors and host cells comprising a TAT nucleic  
CC acid; an antibody specific for a TAT polypeptide; a peptide or organic  
CC molecule which binds to a TAT polypeptide; fusion proteins comprising a  
CC TAT polypeptide; and methods and compositions for the treatment or  
CC diagnosis of cancer in mammals. TAT polypeptides, nucleic acids,  
CC antibodies, antagonists, binding molecules and compositions are useful  
CC for diagnosing or treating a cell proliferative disorder associated with  
CC increased TAT expression, particularly cancers such as breast cancer,  
CC colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder  
CC cancer, pancreatic cancer, cervical cancer, cancers of the central  
CC nervous system, melanoma and leukaemia. TAT nucleic acids may further be  
CC used as hybridisation probes, in chromosome and gene mapping, in  
CC chromosome identification and in gene therapy. The present sequence  
CC represents a TAT nucleic acid of the invention

PT Early detection of soft tissue sarcoma comprises determining expression
PT of a gene in a first soft tissue sample and a normal soft tissue sample
PT and comparing the gene expression, also useful in treating soft tissue
PT sarcoma.
XX
PS Example 2; SEQ ID NO 5576; 210pp; English.
XX
CC The invention relates to a novel method for detecting soft tissue sarcoma
CC which comprises obtaining a first soft tissue sample from an individual
CC and a normal soft tissue sample from the same or different individual,
CC determining the expression of a gene in both samples and comparing the
CC expression of the gene in both soft tissue samples, where a higher level
CC of protein expression in the first soft tissue sample indicates the
CC presence of soft tissue sarcoma. The method of the invention has
CC cytostatic applications and may be useful for detecting soft tissue
CC sarcoma, possibly via gene therapy or vaccine production. The nucleic
CC acid sequences may be useful in diagnostic and screening applications.
CC The current sequence is that of a human soft tissue sarcoma-upregulated
CC DNA of the invention. The current sequence is not shown within the
CC specification per se but was submitted in CD format by the inventor.

XX
XX New recombinant nucleic acid encoding carcinoma associated protein,
XX useful for preparing compositions for treating carcinomas.
XX
XX Claim 1; SEQ ID NO 1226; 245pp; English.
XX
XX The invention relates to recombinant carcinoma associated (CA) nucleic
XX acid sequences from mouse and human (ADA01482-ADA03094), and to
XX recombinant carcinoma associated proteins (CAP) encoded by them. The
XX invention also encompasses expression vectors and host cells comprising a
XX CA nucleic acid, a polypeptide (especially an antibody) that specifically
XX binds to the protein, and a biochip comprising CA nucleic acid or
XX fragments thereof. The sequences of the invention were identified using
XX oncogenic retroviruses, which insert into the genome of the host organism
XX at random. Many of these do not carry transduced host oncogenes or
XX pathogenic trans-acting viral genes, meaning that cancer incidence is a
XX direct consequence of the effects of proviral integration into host
XX protooncogenes. The CA nucleic acid sequences can be used to diagnose
XX carcinoma (especially breast cancer, prostate cancer, lymphoma or
XX leukaemia) or a propensity to carcinoma by determination of the sequence
XX of a CA gene, or by determination of CA gene expression in particular
XX tissues. CA nucleic acids, proteins and antibodies are also useful as
XX therapeutic agents and in screening and evaluating drug candidates. The
XX present sequence represents a specifically claimed human CA nucleic acid
XX sequence of the invention. Note: The complete sequence data for this
XX patent did not form part of the printed specification, but was obtained
XX in electronic format directly from WIPO at
XX ftp.wipo.int/pub/published_pct_sequences.

XX  
XX Novel isolated nucleic acid molecules (markers) overexpressed in ovarian  
XX cancer cells as compared to their normal non-cancerous ovarian cells are  
XX used to characterize stage, grade, histological type of ovarian cancer.  
XX  
XX Disclosure; SEQ ID NO 19823; 106pp; English.

XX The invention relates to nucleic acid markers which are overexpressed in  
XX ovarian cancer cells as compared to their expression in normal (i.e. non-  
XX cancerous) ovarian cells. The invention also relates to polypeptides  
XX encoded by the markers, antibodies that selectively bind to the  
XX polypeptides, a method of inhibiting ovarian cancer in a patient at risk  
XX of developing ovarian cancer involving inhibiting expression of a gene  
XX corresponding to a marker of the invention and a method of treating a  
XX patient afflicted with ovarian cancer comprising providing to cells of  
XX the patient an antisense oligonucleotide complementary to a marker of the  
XX invention. The markers are useful for assessing if a patient is afflicted  
XX with ovarian cancer, which involves comparing the level of expression of  
XX a marker in a patient sample and a normal level of expression of the  
XX marker in a control non-ovarian cancer sample. A difference between the  
XX expression levels indicates ovarian cancer. The level of expression of a  
XX marker corresponds to a secreted protein or to a transcribed  
XX polynucleotide or its portion. The level of expression of the marker is  
XX assessed by detecting the presence in the sample; a protein or protein  
XX fragment corresponding to the marker. The presence of protein or protein  
XX fragment is detected using an antibody that specifically binds with the  
XX protein or protein fragment. Alternatively, the level of expression of  
XX polynucleotide which anneals with the marker or anneals with a portion of  
XX the polynucleotide comprising the marker, under stringent conditions. The  
XX marker is also used for monitoring the progression of ovarian cancer in a

CC patient which involves detecting expression of the marker in a patient  
CC sample at a first point in time, repeating the method at a subsequent  
CC time and comparing the level of expression. The method is carried out  
CC using an ovarian tissue sample. A composition comprising a marker,  
CC polypeptide or antibody of the invention is used to treat ovarian cancer.  
CC This sequence represents a human ovarian cancer DNA marker of the  
CC invention. Note: The sequence data for this patent did not form part of  
CC the printed specification, but was obtained in electronic format directly  
CC from WIPO at ftp.wipo.int/pub/published\_pct\_sequences.

/note="Organ: Eye; Vector: pCMVSPORT6; A human iris  
library (ix) was normalized by self-subtraction. One  
portion of double stranded plasmid DNA representing the  
library was linearized by NotI. This NotI digested library  
was used as a template for biotinylated RNA synthesis  
using SP6 RNA polymerase. Another portion of the double  
stranded plasmid library was converted to single-stranded  
circles in vitro using Gene II and Exonuclease III (Life  
Technologies). Single-stranded DNA (1 mg) was hybridized  
(Cot 500) with 41 mg of Bio-RNA and vector blocking  
oligonucleotides. The hybridized Bio-RNA/ss-circles were  
removed by streptavidin:phenol extraction. EST analysis  
was performed on the library at the NIH Intramural  
Sequencing Center (NISC)."

 EcoRI site by treatment of T4 RNA ligase and the first  
 strand cDNA was synthesized from oligo dT-selected mRNA by  
 priming with dT-tailed vector. The dT-tailed vector was  
 adjusted to have about 60nt. The cDNA vector was  
 circularized with E. coli DNA ligase after digestion of  
 EcoRI which site is also included in vector. An RNA strand  
 converted to a DNA strand by Okayama-Berg method. The  
 obtained cDNA vectors were used for transformation of  
 competent cells E. coli Top10F by electroporation method.  
 The cDNA libraries constructed by this method are  
 full-length enriched cDNA library. After analyzing and  
 sequencing about 2,000 - 3,000 colonies in original cDNA  
 library, the abundant cDNAs were selected and amplified by  
 PCR reaction using vector region primer including T7  
 promoter as 5' primer and N(dT)14 as 3' primer. The PCR  
 products were used as template for synthesis of  
 biotinylated single stranded RNA by in vitro transcription  
 reaction. The synthesized cDNA probes were hybridized with  
 antisense single stranded cDNAs prepared from original  
 library and incubated with avidin-gel. After removing  
 DNA-RNA hybrids by centrifuge, the subtraced cDNA  
 libraries were constructed by transformation of the  
 remaining DNA into competent cells E. coli Top10F with  
 electroporation method."

  DNA Sequencing: DOE Joint Genome Institute: http://www.jgi.doe.gov
  Clone Distribution: I.M.A.G.E. Consortium/LLNL:
  http://image.llnl.gov
  Naming Conventions: EST name is generated by the concatenation of
  the JGI Clone id and the direction of sequencing. The suffix '.rev'
  indicates a reverse sequencing read of the insert. It does not
  necessarily reflect the orientation of the insert.
  Poly-A: Based upon the presence of a run of 14 or more T residues
  at the beginning of the sequence, this clone was polyadenylated.
  The resulting Poly-T sequence has been removed.

 /clone\_lib="UI-R-CNI"  
 /note="Vector: p773D-PacI; Site\_1: Not I; Site\_2: Eco RI;  
 The UI-R-CNI library is a subtracted library derived from  
 the following pool of seven normalized rat libraries:  
 normalized rat seminal vesicles, normalized rat penis,  
 normalized rat bladder, normalized rat cervix, normalized  
 rat brown adipose, normalized rat fundus, and normalized  
 rat salivary gland. It was constructed according to the  
 procedure described by Bonaldo, Lennon & Soares (Genome  
 Research Genome 6: 791-806, 1996). For construction of  
 the CNI library, plasmid DNA from the pool of normalized  
 libraries was electroporated into competent bacteria for  
 the production of single-stranded circular DNA. This was  
 then used as a tracer in a subtractive hybridization with  
 a driver (PCR amplified inserts from a plasmid DNA template  
 preparation) comprising: a) a pool of about 34,000 clones  
 from the Rat Unigene Set corresponding to plates R-5-AA-NN  
 excluding plates R-5-MM and MN. This pool represented 40%  
 of the final driver population. b) a pool of about 29,000  
 clones from subtracted libraries CA0 and CAL corresponding  
 to plates R-CA0-AMV through R-CA0-AXS, R-CA0-AXZ through  
 R-CA0-BAZ, R-CA0-BFE through R-CA0-BHY, R-CA0-BJS,  
 R-CA0-BKE, R-CA0-BKG-H, R-CA0-BKJ-K, R-CA0-BKP through

 R-CA0-BLN, R-CA0-BLS, R-CA0-BLU-V, R-CA0-BNR, and  
 R-CA0-BLE. The resulting pool represented 20% of the  
 final driver population. c) a pool of about 15,000 clones  
 from non-normalized libraries CS0s, CT0s, CW0s, CX0s  
 and normalized libraries CS0, CT0, CU0, CW0, and CX0  
 corresponding to plates R-CS0s-CBD through R-CS0s-CBO,  
 R-CT0s-CCA through R-CT0s-CAX, R-CU0s-CBP through  
 R-CU0s-CCA, R-CW0s-CCB through R-CW0s-CGM, R-CX0s-CCN  
 through R-CX0s-CCX, R-CS0-BSD, R-CS0-BTD through  
 R-CS0-BTV, R-CS0-BVM, R-CT0-BTW through R-CT0-BUP,  
 R-CT0-BVN, R-CU0-BUQ through R-CU0-BVL, R-CW0-BVW through  
 R-CW0-BWP, R-CW0-BXN through R-CW0-BXO, R-CX0-BMQ through  
 R-CX0-BXM. The resulting pool represented 5% of the final  
 driver population. d) a pool of about 5,000 clones (1,000  
 from non-normalized eye library CV0 and 4,000 from  
 normalized eye library CV1) corresponding to plates  
 R-CV0-BRH through R-CV0-BRR, R-CV1-BRS through R-CV1-BSC,  
 R-CV1-BSE through R-CV1-BTC, and R-CV1-BVO through  
 R-CV1-BVU. This pool represented about 5% of the final  
 driver population. e) A pool of about 10,000 clones from  
 subtracted library BS2, BV0 and BV0p (7-9.5 kb cDNA  
 library fraction from rat whole embryo), and BX0 (0.5-7kb  
 cDNA library fraction from rat whole embryo) corresponding  
 to plates R-BS2-BDB through R-BS2-BFB, R-BV0-ANK through  
 R-BV0-ANR, R-BV0p-AOI through R-BV0p-AOX, and R-BX0-AOY  
 through R-BX0-ASH. The resulting pool represented 5% of  
 the final driver population. f) a pool of about 7,000  
 clones from the seven non-normalized libraries that make  
 up the tracer including CY0, CZ0, DA0, DB0, DC0, DD0, and  
 DE0 corresponding to plates R-CY0-BXP through R-CY0-BXZ,  
 R-CZ0-BYA through R-CZ0-BYI, R-CZ0-BZB-C, R-DA0-BYJ  
 through R-DA0-BYP, R-DA0-BZD through R-DA0-BZH, R-DB0-BYQ  
 through R-DB0-BZA, R-DC0-BZI through R-DC0-BZQ, R-DD0-BZC  
 through R-DD0-CBA, R-DD0-BZR through R-DD0-CAA,

R-DD0-CBB-C, and R-DE0-CAB through R-DE0-CAL. The  
 resulting pool represented about 10% of the final driver  
 population. g) a pool of about 2,000 clones from the pool  
 of normalized libraries, CNO, that makes up the tracer.  
 The corresponding plates are R-CNO-BKW through R-CNO-BLD,  
 R-CNO-BLG, R-CNO-BLP through R-CNO-BLR, R-CNO-BLT,  
 R-CNO-BLW-X, R-CNO-BMB, and R-CNO-BMF through R-CNO-BML.  
 This pool represented 5% of the final driver population.  
 h) a pool of the 28 most abundant clones in the CNO pool  
 corresponding to the following addresses: bkw-a-09-0-UI,  
 bkw-b-09-0-UI, bkw-b-11-0-UI, bkw-b-10-0-UI,  
 bkw-d-01-0-UI, bkw-d-06-0-UI, bkw-g-08-0-UI,  
 bkw-h-12-0-UI, bky-a-05-0-UI, bkr-a-06-0-UI,  
 bkr-a-11-0-UI, bkr-c-06-0-UI, bkr-c-09-0-UI,  
 bkr-d-10-0-UI, bla-a-01-0-UI, bla-a-02-0-UI,  
 bla-f-04-0-UI, bla-g-07-0-UI, bla-g-12-0-UI,  
 blb-a-12-0-UI, blb-f-02-0-UI, blc-a-11-0-UI,  
 blc-e-95-0-UI, bld-1-08-0-UI, bld-f-02-0-UI,  
 blg-h-04-0-UI, blr-a-03-0-UI, blt-f-08-0-UI. This pool  
 represented 5% of the final driver population. i) One  
 abundant CNO clone (corresponding to the address  
 bkr-a-11-0-UI) was digested with Not I and Eco RI and the  
 resulting insert was gel purified. This purified insert  
 was added directly to the driver so that it represented 5%  
 of the final driver population.

/tissue_type="Fruit"
/lab_host="DH10B ampicillin resistant"
/clone_lib="Mdfirt"
/notes="Vector: pBluescript II SK (+); Site 1: NotI;
Site 2: EcoRI; Total RNA was extracted separately from
each stage [young fruitlet (<1cm), young fruitlet (1 cm
dia.), young fruitlet (12cm dia.), maturing fruit 1,
maturing fruit II, mature fruit], using the 'pine tree'
method. Poly(A)+mRNA was isolated twice from total RNA
from each stage using the Oligotex Direct mRNA kit
(Qiagen). mRNA was reverse transcribed into double
stranded cDNA using a modified oligo18(4T) primer with an
identifying tag sequence (see table below). cDNA's from
different stages were pooled in equal amounts before
adapter ligation. Tag identification when sequencing from
5' end: Stage 1 (young fruitlet) insert 18(A)TCGTG; Stage
2 (young fruitlet 1cm dia) insert 18(A)TCGTG; Stage 3
(young fruitlet 12cm dia) insert 18(A)TCGTG; Stage 4
(maturing fruit I) insert 18(A)TCGA; Stage 5 (maturing
fruit II) insert 18(A)TCGA; Stage 6 (mature fruit) insert
18(A)TCGTG; Tag identification when sequencing from 3'
end: Stage 1 (young fruitlet) CACGA18(T) insert; Stage 2
(young fruitlet 1cm dia) CAGCA18(T) insert; Stage 3 (young
fruitlet 12cm dia) ACCGA18(T) insert; Stage 4 (maturing
fruit I) TCGCA18(T) insert; Stage 5 (maturing fruit II)
TCGCA18(T) insert; Stage 6 (mature fruit) ACGCA18(T)
insert. Double stranded cDNAs were size selected (more
than 450 bp), adapted with EcoRI adapters at both ends
and then digested with NotI. The cDNAs were then
directionally cloned into EcoRI-NotI digested pBS II SK(+)
phagemid vector(Stratagene). Identification of adaptors
and tags in 5'-end sequenced clones:

white colony forming units (cfu) in the primary library
before amplification was 2.1x10^6 cfu (colony forming
units). The background of empty clones was less than 1%.
Inserts ranged from 0.5kb to 4 kb, as determined by PCR.
Purified plasmid DNA from the primary library was
converted to single-stranded circles and used as a
template for PCR amplification using the T7 and T3 priming
sites flanking the cloned cDNA inserts. The purified PCR
products, representing the entire cloned cDNA population,
were used as a driver for normalization. Hybridization
between the single-stranded library and the PCR products
was carried out for 44 hours at 30C. Unhybridized
single-stranded DNA circles were separated from hybridized
DNA rendered partially double-stranded and electroporated
into DH10B cells to generate the normalized library. The
total number of clones with insert was 5.6x10^6 cfu.
Background of empty clones was less than 1%."

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NEDO human cDNA sequencing project supported by Ministry of
Economy, Trade and Industry of Japan; cDNA full insert sequencing:
Research Association for Biotechnology (RAB); cDNA library
construction: Helix Research Institute (HRI) (supported by Japan
Key Technology Center etc.); 5'- & 3'-end one pass sequencing: RAB,
HRI, and Biotechnology Center, National Institute of Technology and
Evaluation; clone selection for full insert sequencing: HRI and
RAB; annotation: Reverse Proteomics Research Institute, HRI and
RAB.

On Sep 1, 1999 this sequence version replaced gi:5757565.  
INFORMATION: <http://www.hgsc.bcm.tmc.edu/> or email  
[gc-help@bcm.tmc.edu](mailto:gc-help@bcm.tmc.edu)  
CLONE LENGTH: This sequence does not necessarily represent the  
entire insert of this clone. Overlapping regions of clones are only  
sequenced and submitted once, so the sequence for the remainder of  
the insert may be found in the record for the adjacent clones.  
Overlapping clones are noted at the beginning and end of the  
Features listing.  
ANNOTATION OF FEATURES:  
STGs are identified using ePCR (Genome Res. 7:541-550) searches  
of a local database that includes entries from dbSTS, GDB, and  
local mapping efforts.  
Repeats are identified using RepeatMasker (A. Smit and P. Green,  
unpublished.) for Human and Mouse sequences.  
Genes and Region of sequence similarity are identified by BLAST  
(Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the  
EST and cDNA sequences. Genes demonstrate at least two exons  
flanked by consensus splice sites that maintained sequence  
continuity across the splice junctions. Sequences that are not  
identical matches are annotated as similar.  
SEQUENCING READ COVERAGE: Sequencing is completed to a minimum  
standard of double strand coverage with a minimum of 2 clones and 2  
reads with no ambiguities or 2 chemistries with a minimum of 2  
clones and 3 reads with no ambiguities. If the sequence quality for  
a region does not meet this standard, it will be indicated in the  
annotation as Low Coverage.  
QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality  
standards - estimated error rate less than 1 per 10,000 bases.  
Reports of lowest quality individual bases and measures of base  
quality are listed below. Description of the metrics can be found  
at URL:  
<http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html>.

-----

\* NOTE: Estimated insert size may differ from sequence length  
(see http://www.hgsc.bcm.tmc.edu/docs/genbank\_draft\_data.html).  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 25 contigs. The true order of the pieces  
\* is not known and their order in this sequence record is  
\* arbitrary. Gaps between the contigs are represented as  
\* runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence  
\* as soon as it is available and the accession number will  
\* be preserved.  
\* 1 30391: contig of 30391 bp in length  
\* 30392 30441: gap of 50 bp

Bovine Genome Sequencing Consortium
Direct Submission
Submitted (23-JAN-2006) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Jan 23, 2006 this sequence version replaced gi:71067167.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

----- Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help@bcm.tmc.edu

----- Project Information
Center project name: FKHC
Center clone name: CH240-103F13
----- Summary Statistics
Assembly program: Atlas 3.0;
Consensus quality: 264399 bases at least Q40
Consensus quality: 267053 bases at least Q30
Consensus quality: 269711 bases at least Q20
Estimated insert size: 271703; sum-of-contigs estimation
Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

-----
* NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
* NOTE: this sequence may represent more than one 'clone'.
* NOTE: this is a 'working draft' sequence. It currently
consists of 35 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as

```

\* runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence  
\* as soon as it is available and the accession number will  
\* be preserved.

----- Genome Center

Center: NIH Intramural Sequencing Center

Center code: NISC

Web site: http://www.nisc.nih.gov

Contact: nisc\_zoo@nhgri.nih.gov

----- Project Information

Center project name: lnj

Center clone name: 035017

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is generally based on at least 8X average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

----- Summary Statistics

Sequencing vector: plasmid; n/a; 100% of reads

Chemistry: Dye-terminator Big Dye; 100% of reads

Assembly program: Phrap; version 0.990319

Consensus quality: 172944 bases at least Q40

Consensus quality: 173403 bases at least Q30

Consensus quality: 173643 bases at least Q20

Insert size: 176000; agarose-fp

Insert size: 173798; sum-of-contigs

Quality coverage: 9.18x in Q20 bases; agarose-fp

Quality coverage: 9.29x in Q20 bases; sum-of-contigs

-----

\* NOTE: This is a 'working draft' sequence. It currently

\* consists of 6 contigs. Gaps between the contigs

\* are represented as runs of N. The order of the pieces

\* is believed to be correct as given, however the sizes

\* of the gaps between them are based on estimates that have

\* provided by the submitter.

\* This sequence will be replaced

\* by the finished sequence as soon as it is available and

\* the accession number will be preserved.

\* 1 56412: contig of 56412 bp in length

\* 56413 56512: gap of unknown length

\* 56513 61819: contig of 5307 bp in length

\* 61820 61919: gap of unknown length

\* 61920 68051: contig of 6132 bp in length

\* 68052 68151: gap of unknown length

\* 68152 101952: contig of 33801 bp in length

\* 101953 102052: gap of unknown length

\* 102053 157436: contig of 55384 bp in length

\* 157437 157536: gap of unknown length

\* 157537 174298: contig of 16762 bp in length.

COMMENT

Pseudomonas aeruginosa PAO1 genome annotation, updated, reviewed, Pseudomonas aeruginosa PAO1 genome annotation, from PseudocAP (see <http://www.pseudomonas.com> for latest updates and links to alternate annotations). PseudocAP is coordinated by Fiona S.L. Brinkman (Simon Fraser University, Canada) and Robert E.W. Hancock (University of British Columbia, Canada). We welcome submission through [www.pseudomonas.com](http://www.pseudomonas.com) of any proposed changes.

Protein name confidence' is used to rate our confidence of the accuracy of the protein name.

Class 1: Function experimentally demonstrated in P. aeruginosa.

Class 2: Function of highly similar gene experimentally demonstrated in another organism (and gene context consistent in terms of pathways its involved in, if known).

Class 3: Function proposed based on presence of conserved amino acid motif, structural feature or limited sequence similarity to an experimentally studied gene.

Class 4: Homologs of previously reported genes of unknown function, or no similarity to any previously reported sequences.

TITLE Direct Submission  
JOURNAL Submitted (20-JUL-2005) Human Genome Sequencing Center, Department  
of Molecular and Human Genetics, Baylor College of Medicine, One  
Baylor Plaza, Houston, TX 77030, USA  
----- Genomes Center

Center: Baylor College of Medicine  
Center code: BCM  
Web site: <http://www.hgsc.bcm.tmc.edu/>  
Contact: hgsc-help.bcm.tmc.edu  
----- Project Information  
Center project name: FKEV  
Center clone name: CH240-173K8  
----- Summary Statistics  
Sequencing vector: Plasmid;  
Chemistry: Dye-terminator Big Dye; 100% of reads  
Assembly program: Phrap; version 0.990329  
Consensus quality: 68288 bases at least Q40  
Consensus quality: 73110 bases at least Q20  
Estimated insert size: 94571; sum-of-contigs estimation  
Quality coverage: 1x in Q20 bases; sum-of-contigs estimation  
-----  
\* NOTE: Estimated insert size may differ from sequence length  
\* (see [http://www.hgsc.bcm.tmc.edu/docs/Genbank\\_draft\\_data.html](http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)).  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 20 contigs. The true order of the pieces  
\* is not known and their order in this sequence record is  
\* arbitrary. Gaps between the contigs are represented as  
\* runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence  
\* as soon as it is available and the accession number will  
\* be preserved.  
\*

#### RESULT 71

#### AL662789/c

#### LOCUS

DEFINITION Human DNA sequence from clone XXbac-254F23 on chromosome 6 contains the 5' end of the HLA-DRB1 gene for major histocompatibility complex, class II, DR beta 1, the HLA-DQA1 gene for major histocompatibility complex, class II, DQ alpha 1, the HLA-DQB1 gene for major histocompatibility complex, class II, DQ beta 1, a cytochrome C oxidase polypeptide III pseudogene, a major histocompatibility complex, class II, beta polypeptide pseudogene and two CpG islands, complete sequence.

#### COMMENT

Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vegas@sanger.ac.uk  
Clone requests: clonerequest@sanger.ac.uk  
On Mar 29, 2002 this sequence version replaced gi:19808178.  
The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:  
Em: EMBL; Sw: SWISSPROT; Tr: TREMBL; Wp: WORMPEP; Information on the WORMPEP database can be found at  
http://www.sanger.ac.uk/Projects/C\_elegans/wormpep/XXbac-254F23 is from a CHORI-501 human bac - PGF cell line library VECTOR: pTARBAC2.1

This sequence was generated from part of bacterial clone contigs constructed by the MHC Haplotype Consortium and collaborators. Further information can be found at  
http://www.sanger.ac.uk/HGP/Chr6/MHC

#### -----

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

Bovine Genome Sequencing Consortium
Direct Submission
Submitted (24-JAN-2006) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Jan 24, 2006 this sequence version replaced gi:77377088.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

 Direct Submission  
 Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,  
 Cambridgeshire, CB10 1SA, UK. E-mail enquiries: [vega@sanger.ac.uk](mailto:vega@sanger.ac.uk)  
 Clone requests: [clonerequest@sanger.ac.uk](mailto:clonerequest@sanger.ac.uk)  
 On Dec 20, 2001 this sequence version replaced gi:17221178.  
 The following abbreviations are used to associate primary accession  
 numbers given in the feature table with their source databases:  
 Em, EMBL; Swi, SWISSPROT; Tr, TrEMBL; Wp, WORMPEP; Information  
 on the WORMPEP database can be found at  
[http://www.sanger.ac.uk/Projects/C\\_elegans/wormpep](http://www.sanger.ac.uk/Projects/C_elegans/wormpep) This sequence  
 was generated from part of bacterial clone contigs of human  
 chromosome 10, constructed by the Sanger Centre Chromosome 10  
 Mapping Group. Further information can be found at  
<http://www.sanger.ac.uk/HGP/Chr10>  
 RP11-714M16 is from the library RPCI-11.3 constructed by the group  
 of Pieter de Jong. For further details see  
<http://www.chori.org/bacpac/home.htm>

 -----  
 This sequence was finished as follows unless otherwise noted: all  
 regions were either double-stranded or sequenced with an alternate  
 chemistry or covered by high quality data (i.e., phred quality >=  
 30); an attempt was made to resolve all sequencing problems, such  
 as compressions and repeats; all regions were covered by at least  
 one subclone; and the assembly was confirmed by restriction digest,  
 except on the rare occasion of the clone being a YAC.

Quality coverage: 12.9 in Q20 bases; sum-of-contigs estimation.  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 15 contigs. Gaps between the contigs  
\* are represented as runs of N. The order of the pieces  
\* is believed to be correct as given, however the sizes  
\* of the gaps between them are based on estimates that have  
\* provided by the submitter.  
\* This sequence will be replaced  
\* by the finished sequence as soon as it is available and  
\* the accession number will be preserved.

----- Genome Center  
Center: Baylor College of Medicine  
Center code: BCM  
Web site: http://www.hgsc.bcm.tmc.edu/  
Contact: hgsc-help@bcm.tmc.edu  
----- Project Information  
Center project name: APAA  
Center clone name: BAP-144G2  
----- Summary Statistics  
Sequencing vector: Plasmid;  
Chemistry: Dye-terminator Big Dye; 100% of reads  
Assembly program: Phrap; version 0.990329  
Consensus quality: 165376 bases at least Q40  
Consensus quality: 167017 bases at least Q30  
Consensus quality: 168287 bases at least Q20  
Estimated insert size: 178627; sum-of-contigs estimation  
Quality coverage: 17x in Q20 bases; sum-of-contigs estimation  
-----  
\* NOTE: Estimated insert size may differ from sequence length  
\* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank\_draft\_data.html).  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 13 contigs. The true order of the pieces  
\* is not known and their order in this sequence record is  
\* arbitrary. Gaps between the contigs are represented as  
\* runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence  
\* as soon as it is available and the accession number will  
\* be preserved.

1 13948: contig of 13948 bp in length  
\* 13949 14048: gap of unknown length  
\* 14049 32579: contig of 18531 bp in length  
\* 32580 32679: gap of unknown length  
\* 32680 59556: contig of 26877 bp in length  
\* 59557 59656: gap of unknown length  
\* 59657 61694: contig of 2037 bp in length  
\* 61694 61793: gap of unknown length  
\* 61793 63797: contig of 2004 bp in length  
\* 63797 63897: gap of unknown length  
\* 63897 66962: contig of 3065 bp in length  
\* 66963 67062: gap of unknown length  
\* 67063 137626: contig of 70564 bp in length  
\* 137627 137726: gap of unknown length  
\* 137727 141731: contig of 4005 bp in length  
\* 141732 141731: gap of unknown length

-----  
 This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

COMMENT ----- Genome Center
Center: Washington University Genome Sequencing Center
Center code: WUGSC
Web site: http://genome.wustl.edu
Contact: submissions@watson.wustl.edu
----- Summary Statistics
-----
Center project name: H_NH0297J22
-----
NOTICE:
This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by sequence
from more than one subclone; and the assembly was confirmed by
restriction digest.
MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren,
Department of Genetics, Washington University, St. Louis MO. For
additional information about the map position of this sequence, see
http://genome.wustl.edu
SOURCE INFORMATION:
The RPCI-11 human BAC library was made from the blood of one male
donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved
approach for construction of bacterial artificial chromosome
libraries. Genomics 51:1-8. The clone may be obtained either from
Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
and coworkers at http://www.chori.org
VECTOR: pBACe3.6
NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP11-57J18; the clone sequenced
to the right is RP11-549G13. Actual start of this clone is at base
position 1 of RP11-297J22; actual end is at base position 183887 of
RP11-297J22.
RP11-297J22 contains a tandem repeat between bases 149996 to 150321
where there are low quality bases. Digest and pcr information
confirm the assembly.
There are polymorphisms between RP11-297J22 and RP11-549G13.

-----  
 \* NOTE: This is a 'working draft' sequence. It currently  
 \* consists of 22 contigs. The true order of the pieces  
 \* is not known and their order in this sequence record is  
 \* arbitrary. Gaps between the contigs are represented as  
 \* runs of N, but the exact sizes of the gaps are unknown.  
 \* This record will be updated with the finished sequence  
 \* as soon as it is available and the accession number will  
 \* be preserved.

On or before Sep 4, 1997 this sequence version replaced gi:1766071,
gi:177380, gi:2289024.
Sequencing is completed to a minimum standard of double strand
coverage with a minimum of 2 clones and 2 reads with no ambiguities
or 2 chemistries with a minimum of 2 clones and 3 reads with no
ambiguities. If the sequence quality does not meet this standard,
it will be indicated in the annotation.
The repeat regions shown were identified using RepeatMasker by
Adrian Smit.
Sequence similarities were identified using Powerblast by Jinghui
Zhang.
Exon/Intron boundaries of identified genes were chosen if there
were canonical splice junctions that maintained sequence continuity
across the splice junctions.

----- Project Information -----
Center project name: H RG045H05
----- Summary Statistics -----
Sequencing vector: M13; 100%
Sequencing vector: plasmid; 0%
Chemistry: Dye-primer ET; 71% of reads
Chemistry: Dye-terminator Big Dye; 29% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: bases at least Q40
Consensus quality: bases at least Q30
Consensus quality: bases at least Q20
Insert size: 181000; agarose-fp
Insert size: 195258; sum-of-contigs
Quality coverage: in Q20 bases; agarose-fp
Quality coverage: in Q20 bases; sum-of-contigs

----- NOTE: This is a 'working draft' sequence. It currently
* consists of 18 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
*

Summary Statistics  
Consensus quality: 201548 bases at least Q40  
Consensus quality: 207017 bases at least Q30  
Consensus quality: 207950 bases at least Q20  
Estimated insert size: 238990; agarose-fp estimation  
Estimated insert size: 208912; sum-of-contigs estimation  
Quality coverage: 6.28 in Q20 bases; agarose-fp estimation  
Quality coverage: 7.19 in Q20 bases; sum-of-contigs estimation.  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 8 contigs. Gaps between the contigs  
\* are represented as runs of N. The order of the pieces  
\* is believed to be correct as given, however the sizes  
\* of the gaps between them are based on estimates that have  
\* provided by the submitter.

\* This sequence will be replaced  
\* by the finished sequence as soon as it is available and  
\* the accession number will be preserved.

\* 1 5137: contig of 5137 bp in length  
\* 5138 5237: gap of unknown length  
\* 5238 47243: contig of 42006 bp in length  
\* 47244 47343: gap of unknown length

3 (bases 1 to 216540)
Rat Genome Sequencing Consortium.
Direct Submission
Submitted (15-NOV-2002) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Nov 15, 2002 this sequence version replaced gi:23269344.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

-----
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one subclone; and the assembly was confirmed by restriction digest,
except on the rare occasion of the clone being a YAC.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em, EMBL; Sw, SWISSPROT; Tr, TrEMBL; Wp, WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep
Sequence from the Mouse Genome Sequencing Consortium whole genome
shotgun may have been used to confirm this sequence. Sequence data
from the whole genome shotgun alone has only been used where it has
a phred quality of at least 30.
RP23-136M7 is from the RPCI-23 Mouse BAC Library
constructed by the group of Pieter de Jong.

COMMENT

On May 10, 2003 this sequence version replaced gi:25009391. The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence

contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

 TITLE Direct Submission  
 JOURNAL Submitted (23-JAN-2006) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA  
 COMMENT On Jan 23, 2006 this sequence version replaced gi:70912605.  
 The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole

genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Direct Submission

Submitted (21-SEP-2002)

Human Genome Sequencing Center, Department

of Molecular and Human Genetics, Baylor College of Medicine, One

Baylor Plaza, Houston, TX 77030, USA

On Sep 21, 2002 this sequence version replaced gi:21735811.

The sequence in this assembly is a combination of BAC based reads

and whole genome shotgun sequencing reads assembled using Atlas

(<http://www.hgsc.bcm.tmc.edu/projects/rat/>). As a result, the

sequence may extend beyond the ends of the clone and there may be

contigs that consist entirely of whole genome shotgun sequence

reads. Both end sequences and whole genome shotgun sequence only

contigs will be indicated in the feature table.

## Rat Genome Sequencing Consortium.

Direct Submission

Submitted (08-OCT-2002)

of Molecular and Human Genetics, Baylor College of Medicine, One  
 Baylor Plaza, Houston, TX 77030, USA

On Sep 19, 2002 this sequence version replaced gi:21737862.

The sequence in this assembly is a combination of BAC based reads  
 and whole genome shotgun sequencing reads assembled using Atlas  
 (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described  
 in the feature table below represents a scaffold in the Atlas

assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

XX WPI: 2004-090973/09.
DR P-PSDB; ADI28458.
XX New nucleic acid molecule encoding a human G-protein coupled receptor,
PT RAI3, useful for preventing, treating or ameliorating chronic obstructive
PT pulmonary disease (COPD), COPD-like disorder, or the underlying symptoms
PT of COPD.
PS Disclosure: SEQ ID NO 30; 301pp; English.
XX The present sequence is that of DNA encoding a peptide corresponding to
CC amino acids 340-353 of a human G-protein coupled receptor, denoted
CC retinoic acid induced 3 (RAI-3) protein ADI28460. The peptide was
CC identified in studies of RAI-3 phosphorylation in response to cigarette
CC smoke. Primers based on this sequence can be used in a PCR to identify
CC individuals at risk for developing chronic obstructive pulmonary disease
CC (COPD). RAI-3 is tyrosine phosphorylated and/or is associated/complexed
CC with tyrosine phosphorylated proteins only in cells that have been
CC exposed to cigarette smoke. Since RAI-3 is primarily expressed in lung
CC tissue, and since cigarette smoke is a major causative factor of COPD,
CC RAI-3 provides a novel cellular target for identifying modulators, e.g.
CC agonists or antagonists, useful for the treatment and/or prevention of
CC COPD and related disorders such as emphysema and chronic bronchitis. RAI-
CC 3 modulators, e.g. agonists and antagonists, especially antisense
CC compounds, can be used to treat COPD and other disorders an diseases
CC associated with regulation of NF-kB and/or its associated or interacting
CC signaling molecules. Single nucleotide polymorphisms (SNPs) detected in
CC the RAI-3 gene are useful for determining COPD association in
CC individuals. RAI-3 nucleic acid molecules and polypeptides are useful for
CC preventing, treating or ameliorating disorders related to aberrant GPCR
CC signaling or cell cycle regulation, pulmonary disorders, inflammatory
CC lung disorders, COPD, the underlying symptoms of COPD, COPD-related
CC disorders or conditions, autoimmune disorders, disorders related to
CC hyperimmune activity, inflammatory conditions, disorders related to
CC aberrant acute phase responses, hypercongenital conditions, birth
CC defects, necrotic lesions, wounds, organ transplant rejection, renal
CC diseases, ischaemia-reperfusion injury, heart disorders, disorders
CC related to aberrant signal transduction, proliferation disorders,
CC cancers, HIV infection, asthma, cystic fibrosis, pulmonary fibrosis,
CC ulcerative colitis, cerebral infarct, myocardial infarct, diabetic
CC neuropathy, allergic rhinitis, Crohn's disease, atherosclerosis,
CC rheumatoid arthritis, inflammatory/autoimmune disorders, glioblastoma,
CC pulmonary small cell undifferentiated carcinoma, carcinoma of the breast,
CC colon, lung, ovary, pancreas, prostate, non-Hodgkin's lymphoma, disorders
CC associated with aberrant cell adhesion, I-CAM function and/or regulation,
CC E-selectin function and/or regulation, or aberrant NF-kB function and/or
CC regulation (all claimed).

DR New isolated nucleic acids and polypeptides capable of eliciting a
PT humoral and/or cellular immune response, useful for diagnosing,
PT preventing or treating cancer, particularly colon cancer.
XX Claim 1; SEQ ID NO 1937; 87pp; English.
PS The invention relates to polynucleotide and polypeptide sequences
XX associated with cancer, particularly colon cancer. Also disclosed are (i)
CC an expression vector comprising the polynucleotide, (ii) a host cell
CC transformed or transfected with the expression vector, (iii) an isolated
CC antibody, or its antigen-binding fragment, which specifically binds to
CC the polypeptide, (iv) a method of detecting or determining the presence
CC of cancer in a patient, (v) a fusion protein comprising at least one of
CC the polypeptides, (vi) an oligonucleotide that hybridises to the
CC polynucleotide sequence under highly stringent conditions, and (vii) a
CC method of stimulating and/or expanding T cells specific for a tumour
CC protein. The polypeptide specifically comprises the amino acid sequence
CC of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
CC frames (ORFs) of C636S. These polypeptides are encoded by the
CC polynucleotide sequences, where both are capable of eliciting a humoral
CC and/or cellular immune response. The polynucleotides, polypeptides, and
CC antibodies are useful for diagnosing, preventing or treating cancer,
CC particularly colon cancer. The polynucleotide and polypeptide sequences
CC are also useful in DNA strand invasion, antisense inhibition, mutational
CC analysis, nucleic acid purification, isolation of transcriptionally
CC active genes, blocking or transcription factor binding, genome cleavage
CC or in situ hybridisation, and as enhancers of transcription or
CC biomarkers. This sequence represents a human colon cancer associated
CC cDNA. Note: The sequence data for this patent was obtained in electronic
XX format directly from the USPTO web site at seqdata.uspto.gov

XX
XX PT Novel human proteins having hydrophobic domains used for research and
XX diagnostic purposes.
XX
XX PS Claim 3; Page 88; 117pp; English.
XX
XX This sequence represents the hydrophobic domain containing protein, clone
XX HP10549 coding region. The sequence is isolated from a human stomach
XX cancer cell line. The invention relates to human proteins with
XX hydrophobic domains, the DNA and the cDNA encoding them. The
XX polynucleotides and proteins are predicted to have biological activities
XX which make them suitable for treating, preventing or ameliorating medical
XX conditions in humans and animals. Suggested activities include
XX nutritional activity (nutritional source or supplement); cytokine and
XX cell proliferation/differentiation activity; immune stimulating (e.g. as
XX vaccines) or suppressing activity (e.g. to treat various immune
XX deficiencies such as SCIDS or HIV, connective tissue disease, systemic
XX lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary
XX inflammation, Guillain-Barre syndrome, myasthenia gravis, graft-versus-host disease
XX and autoimmune inflammatory eye disease, as well as asthma, allergies and
XX organ transplantation); haematopoiesis regulating activity (e.g. in
XX treatment of myeloid or lymphoid cell deficiencies); tissue growth
XX activity (e.g. wound healing and tissue repair, ulcers, burns,
XX periodontal disease); activin/inhibin activity; chemotactic/chemokinetic
XX activity; haemostatic and thrombolytic activity (e.g. treating
XX haemophilias); receptor/ligand activity; anti-inflammatory activity; and
XX tumour inhibition activity. The polynucleotides are also stated to be
XX useful for gene therapy. Other activities include inhibiting infections
XX caused by bacteria, fungi, viruses and other parasites (e.g. Hepatitis,
XX malaria); effecting bodily characteristics such as, e.g. weight, colour,
XX skin, effecting biorhythms or cardiac cycles; enhancing fertility;
XX treatment of depression; treatment of pain; hormonal or endocrine
XX activity. The polynucleotides may also be used for recombinant expression
XX of the protein

XX Novel isolated polypeptide encoded by breast cancer marker gene, useful  
PT for diagnosing, staging, monitoring, prognosing and treating diseases  
PT associated with breast cancer.

XX Disclosure; Page 187-188; 725pp; English.

XX The invention relates to an isolated polypeptide encoded by a breast  
CC cancer marker gene comprising any of 1417 21-805 nucleotide sequences,  
CC given in the specification. The methods of the invention are useful for  
CC diagnosing patients having an identified breast mass or symptoms  
CC associated with breast cancer, to diagnose breast cancer or its  
CC precursors, and for monitoring the efficacy of treatment of a breast  
CC cancer patient (e.g. efficacy of chemotherapy). The methods are also  
CC useful for evaluating a patient before, after or during therapy, to  
CC evaluate the reduction in a tumour burden. The breast cancer marker gene  
CC proteins are useful as immunogens for raising antibodies, by immunising a  
CC mammal with a breast cancer marker protein. The marker proteins are  
CC useful as bait proteins in a two-hybrid or three-hybrid assay, to  
CC identify other proteins which bind to or interact with the marker  
CC proteins. The breast cancer marker genes are useful as surrogate marker  
CC disease states, in particular, breast cancers. The breast cancer marker  
CC genes are useful as pharmacodynamic marker genes. An antibody which  
CC selectively binds to a protein of a breast cancer marker gene is useful  
CC for treating cancers, particularly breast cancers. The host cell of the  
CC invention is useful for producing non-human transgenic animals. This  
CC polynucleotide sequence represents one of the breast cancer marker genes  
CC of the invention

XX Novel mammalian G protein coupled receptors, useful for identifying  
PT compounds that modulates diagnosing and treating disease condition  
PT associated with GPCR dysfunction e.g. autoimmune diseases, angina  
PT pectoris, Parkinson's disease.  
XX  
XX Claim 151; SEQ ID NO 1137; 542pp; English.  
PS  
CC The invention relates to human and mouse G protein-coupled receptors  
CC (GPCRs) and nucleic acids encoding them. The invention also relates to  
CC sequences at least 90% identical to the GPCR proteins and nucleic acids  
CC of the invention; methods of treating, preventing or diagnosing diseases  
CC associated with GPCRs of the invention; methods of screening for  
CC compounds useful in the treatment of GPCR-related diseases; a transgenic  
CC mouse comprising a GPCR gene of the invention; a mouse comprising a  
CC mutation in a GPCR transgene or in an endogenous GPCR gene; cells derived  
CC from the transgenic mice; kits comprising several mice, each of which has  
CC a mutation in a different GPCR gene of the invention; and kits comprising  
CC probes which hybridise to GPCR polynucleotides of the invention. The  
CC invention further discloses variants of the GPCR polypeptides and vectors  
CC comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may  
CC be used in the diagnosis, treatment or prevention of a wide variety of  
CC diseases including neurological disorders (e.g., Alzheimer's disease,  
CC depression, diabetic neuropathy, Parkinson's disease or schizophrenia);  
CC disorders of the adrenal gland; disorders of the colon or intestine  
CC (e.g., Crohn's disease, diarrhoea, food poisoning or irritable bowel  
CC syndrome); cardiovascular disorders (e.g., angina, cardiac arrhythmia or  
CC myocardial infarction); muscular disorders; blood disorders (e.g.,  
CC anaemia or leukaemia); immune disorders (e.g., autoimmune disorders or  
CC AIDS); bone and joint disorders (e.g., osteoarthritis, rheumatoid  
CC arthritis, gout or osteoporosis); metabolic or nutritive disorders (e.g.,  
CC obesity, enzyme deficiency-related diseases or vitamin deficiency-related  
CC diseases); and disorders of the kidney, liver, lung, breast, ovary,  
CC uterus, prostate, testis, skin, stomach, pancreas, spleen, thymus and  
CC thyroid (e.g., cancers). The present sequence represents a GPCR-encoding  
CC nucleic acid of the invention. Note: The full sequence data for this  
CC patent did not form part of the printed specification; those sequences  
CC not shown were obtained in electronic format directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences.

XX  
XX The invention relates to novel nucleic acid sequences derived from rat  
CC dermal papilla, human keratinocytes and neonatal foreskin fibroblasts,  
CC and mouse embryonic skin, keratinocyte stem cells and transit amplifying  
CC cells. Polypeptides of the invention may be used to treat inflammation,  
CC cancer and neurological diseases. The proteins may be used to stimulate  
CC the growth and motility of keratinocytes, to inhibit the growth of cancer  
CC cells, to modulate angiogenesis and tumour vascularisation, to modulate  
CC skin inflammation, to modulate epithelial cell growth and to inhibit  
CC binding of HIV-1 to leukocytes. The invention may also be used to treat  
CC growth and developmental defects, skin wounds and hair follicle  
CC disorders. Sequences AAZ61606-261832 represent cDNA sequences derived  
CC from several mouse, rat or human skin cell types. Sequences AAZ61606-  
CC Z61649, AAZ61725-261765, AAZ61802-261811 and AAZ61826 encode proteins  
CC with an N-terminal signal sequence, indicating that the proteins are  
CC secreted. Sequences AAZ61650-261668, AAZ61766-261780, AAZ61812-261817 and  
CC AAZ61827-261829 encode proteins with one or more putative transmembrane  
CC domains

PT fragment of gene encoding membrane-associated proteins, receptors or ion  
PT channels.  
XX Claim 1; Col 215-216; 147pp; English.

CC The invention relates to a combination comprising several polynucleotide  
CC sequences comprising a fragment of gene encoding membrane-associated  
CC proteins, receptors or ion channels. The combination is useful as a  
CC probe, for research and diagnostic applications, for monitoring the  
CC expression of several expressed polynucleotides, in the diagnosis and  
CC monitoring of treatment of pancreatic disease, cancer, immunopathology or  
CC neuropathology, for investigating an individual's predisposition to the  
CC above disease, in genetic or gene expression analysis of polynucleotide  
CC sequences, to investigate cellular responses to infection or drug  
CC treatment, as hybridisable array elements in a microarray, to purify a  
CC subpopulation of mRNAs, cDNAs or genomic fragments in a sample, in  
CC diagnostics, prognostics and treatment regimens, in drug discovery and  
CC development, in toxicological and carcinogenicity studies, and in  
CC forensics or pharmacogenomics, to monitor the progression of disease, to  
CC monitor the efficacy of treatment, to diagnose the conditions of the  
CC pancreas e.g. diabetes, pancreatic cholera, hyperlipidaemia or  
CC fibrocystic disease, to diagnose a cancer e.g. leukaemia, adenocarcinoma  
CC or sarcoma, to diagnose immunopathologies e.g. AIDS, allergies, anaemia,  
CC asthma or gout, to diagnose neuropathologies e.g. Alzheimer's disease,  
CC dementia or Huntington's disease, to rapidly screen large numbers of  
CC candidate drug molecules and as query sequences against GenBank.  
CC SwissProt, BLOCKS and PRINTS databases. The combination is employed to  
CC fine tune the treatment regimen and thus the expression patterns  
CC associated with undesirable side effects are avoided. The present  
CC sequence represents a cDNA encoding a fragment of gene encoding human  
CC membrane-associated proteins, receptors or ion channels

XX PT Novel isolated antibody capable of binding to tumor-associated antigenic
XX PT target polypeptide, useful for treating cell proliferative disorder e.g.
XX PT cancer.
XX XX
PS Claim 1; SEQ ID NO 64; 337pp; English.
XX XX
XX CC The invention relates to a novel isolated antibody binding to a
XX CC polypeptide having at least 80% sequence identity to a polypeptide having
XX CC any one of 76 fully defined 182-910 amino acid tumor-associated antigenic
XX CC target polypeptide (TAT) sequences (AEA00127-AEA00202) given in the
XX CC specification, a polypeptide having any one of (AEA00127-AEA00202),
XX CC lacking its associated signal peptide, or an extracellular domain of a
XX CC polypeptide having any one of (AEA00127-AEA00202). The polypeptide is
XX CC encoded by the nucleotide sequence having any one of (AEA00049-AEA00126).
XX CC An antibody of the invention has cytostatic activity. The antibody is
XX CC useful for inhibiting growth of a cell expressing TAT188, which involves
XX CC contacting the cell with the antibody. The cell is a cancer cell chosen
XX CC from breast, colon, rectum, endometrium, kidney, lung, ovary, skin and
XX CC liver cell. The cancer cell is a mammalian cell, preferably a human cell.
XX CC The antibody is also useful for detecting the level of TAT188
XX CC polypeptide expressed in a test cell relative to a control cell, and for
XX CC detecting the level of TAT188 polypeptide or a polypeptide having at
XX CC least 80 % sequence identity to the TAT188 polypeptide sequence in a test
XX CC cell relative to a control cell. The antibody is useful for treating a
XX CC preventing a cell proliferative disorder associated with increased
XX CC expression or activity of a polypeptide having at least 80 % identity to
XX CC a TAT188 polypeptide sequence. The cell proliferative disorder is cancer.
XX CC The method of the invention is useful for inhibiting the growth of a
XX CC cancer cell. The present sequence encodes a polypeptide of the invention.

XX PT Novel isolated antibody e.g. anti-E16 or anti-TAT112 antibody that binds
XX PT to tumor-associated antigenic target polypeptide, useful for diagnosing
XX PT or treating cancer.
XX XX
XX PS Claim 1; SEQ ID NO 64; 96pp; English.
XX XX
XX CC This invention relates to a novel isolated antibody, for example anti-E16
XX CC or anti-TAT112 antibody, that binds to a tumor-associated antigenic
XX CC target polypeptide (TAT) and that lacks an associated signal peptide
XX CC sequence. The invention may be useful for the development of compounds
XX CC with a cytostatic activity acting as antagonists of the TAT188
XX CC polypeptide or RNA interference whilst the disclosed sequences may be
XX CC useful for gene therapy. The invention is useful for inducing the death
XX CC of a cell (such as a cancer cell chosen from breast, colon, rectum,
XX CC endometrium, kidney, lung, ovary, skin and liver) to which it binds,
XX CC inhibiting proliferation or promoting cell death of a cell expressing
XX CC TAT188. In addition, the invention may be useful for detecting the level
XX CC of TAT188 polypeptide in a test cell relative to a control cell, or
XX CC treating or preventing a cell proliferative disorder associated with
XX CC increased expression of TAT188. The novel antibody of the invention is
XX CC useful for inhibiting the growth of a cancer cell and may be useful for
XX CC diagnosing or treating cancer. The present sequence is that of the human
XX CC TAT143 cDNA which encodes a protein against which an antibody of the
XX CC invention may be targeted.

XX PT Novel human proteins having hydrophobic domains used for research and
XX PT diagnostic purposes.
XX PS Claim 4; Page 111-113; 117pp; English.
XX CC This sequence represents the hydrophobic domain containing protein, clone
XX CC HP10549 nucleotide sequence. The sequence is isolated from a human
XX CC stomach cancer cell line. The invention relates to human proteins with
XX CC hydrophobic domains, the DNA and the cDNA encoding them. The
XX CC polynucleotides and proteins are predicted to have biological activities
XX CC which make them suitable for treating, preventing or ameliorating medical
XX CC conditions in humans and animals. Suggested activities include
XX CC nutritional activity (nutritional source or supplement); cytokine and
XX CC cell proliferation/differentiation activity; immune stimulating (e.g. as
XX CC vaccines) or suppressing activity (e.g. to treat various immune
XX CC deficiencies such as SCIDS or HIV, connective tissue disease, systemic
XX CC lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary
XX CC inflammation, Guillain-Barre syndrome, autoimmune thyroiditis, insulin
XX CC dependent diabetes mellitus, myasthenia gravis, graft-versus-host disease
XX CC and autoimmune inflammatory eye disease, as well as asthma, allergies and
XX CC organ transplantation); haematopoiesis regulating activity (e.g. in
XX CC treatment of myeloid or lymphoid cell deficiencies); tissue growth
XX CC activity (e.g. wound healing and tissue repair, ulcers, burns,
XX CC periodontal disease); activin/inhibin activity; chemotactic/chemokinetic
XX CC activity; haemostatic and thrombolytic activity (e.g. treating
XX CC haemophilias); receptor/ligand activity; anti-inflammatory activity; and
XX CC tumour inhibition activity. The polynucleotides are also stated to be
XX CC useful for gene therapy. Other activities include inhibiting infections
XX CC caused by bacteria, fungi, viruses and other parasites (e.g. Hepatitis,
XX CC malaria); effecting bodily characteristics such as, e.g. weight, colour,
XX CC skin; effecting biorhythms or cardiac cycles; enhancing fertility;
XX CC treatment of depression; treatment of pain; hormonal or endocrine
XX CC activity. The polynucleotides may also be used for recombinant expression
XX CC of the protein

XX PX Transformation of cells with a fusion protein of an orphan receptor
XX PT protein with a fluorescent protein useful for identification of ligands
XX PT to the orphan receptor.
XX PX Example 4; SEQ ID NO 196; 594pp; Japanese.
XX CC This invention relates to a novel method of identifying ligands to an
XX CC orphan receptor protein which comprises transforming cells with DNA
XX CC encoding a fusion protein of the orphan receptor with a fluorescent
XX CC protein, so that the fusion protein is expressed in the cells (or cell
XX CC membranes isolated from them) and contacting the cells with the potential
XX CC ligand to be tested. A suitable fluorescent protein for incorporation in
XX CC the fusion protein is green fluorescent protein (GFP), for example GFP-1,
XX CC wild-type GFP, GFPuv or Enhanced GFP (EGFP). The method is useful for the
XX CC identification of ligands binding to an orphan receptor protein.

XX PX Diagnosing breast cancer in a patient comprises detecting the level of
XX PT gene expression in cell or tissue samples, where a differential gene
XX PT expression is indicative of breast cancer.
XX PS Claim 1; SEQ ID NO 307; 260pp + Sequence Listing; English.
XX PX The present invention relates to methods of diagnosing breast cancer in a
XX CC patient, which comprise detecting the level of expression in a tissue
XX CC sample of two or more genes selected from those shown in ABT09867-
XX CC AB11112, where a differential expression of the genes indicates breast
XX CC cancer. The methods are useful in diagnosing, treating, detecting the
XX CC progression, and in monitoring treatment of breast cancer in patients.
XX CC The methods are also useful as a screening tool for agents that modulate
XX CC the onset or progression of breast cancer. The breast cancer genes may be
XX CC used as diagnostic markers for the prediction or identification of the
XX CC malignant state of breast tissue, for confirming the type and progression
XX CC of cancer, and for drug screening and assays. The present sequence is a
XX CC coding sequence of the invention. Note: The sequence data for this patent
XX CC did not form part of the printed specification, but was obtained in
XX CC electronic format directly from WIPO at

PT New G-protein coupled receptor-like retinoic acid induced gene 1 (GPCR-  
PT like RAIG1) polypeptide and gene, useful for diagnosing or treating  
PT metabolic disorders, e.g. obesity, anorexia, cachexia or diabetes.  
XX Claim 10; Page 16-17; 150pp; English.

CC The present sequence is that of human G-protein coupled receptor-like  
CC retinoic acid induced gene 1 (GPCR-like RAIG1). This is the human  
CC homologue of murine GPCR-like RAIG1. The murine gene was shown to be  
CC differentially regulated during fasting-feeding cycles in mice, with  
CC moderate induction early in fasting, down-regulation with extended  
CC fasting and 4-fold up-regulation with feeding in recovery from fasting.  
CC The differentially expressed gene, its mRNA, and the encoded protein, can  
CC each be manipulated to detect and treat metabolic disorders associated  
CC with up- or down-regulation of GPCR-like RAIG1 activity, such as obesity,  
CC anorexia, cachexia or diabetes

XX Screening, diagnosing and/or treating carcinoma, including breast,  
PT pancreatic, lung, liver, ovarian and colon cancer by detecting the change  
PT in expression or activity of an RAIG1 polypeptide or encoding nucleic  
PT acid molecule.  
XX Claim 1; Fig 2; 43pp; English.

XX This sequence encodes retinoic acid-inducible gene 1 (RAIG1) polypeptide.  
CC RAIG1 is an orphan G-protein coupled receptor (GPCR) located on  
CC chromosome 12. RAIG1 shows a restricted expression pattern compared to a  
CC related receptor, GPCR5B, which is widely expressed in peripheral and  
CC central tissues. The RAIG1 cDNA and polypeptide sequence may be used in  
CC the method of the invention for screening for and/or diagnosis of  
CC carcinoma in a subject, and/or monitoring the effectiveness of carcinoma  
CC therapy. The method comprises detecting and/or quantifying in a  
CC biological sample obtained from the subject an RAIG1 polypeptide and a  
CC nucleic acid molecule. The RAIG1 polypeptide and nucleic acid molecule  
CC are useful in the manufacture of a medicament for the treatment of  
CC carcinoma, where the composition is a vaccine. An agent which interacts  
CC with or causes change in the expression or activity of an RAIG1  
CC polypeptide or nucleic acid molecule, is also useful in the manufacture  
CC of a medicament for the treatment of carcinoma that is breast cancer,  
CC pancreatic cancer, lung cancer, liver cancer, ovarian cancer, colon  
CC cancer and/or osteosarcoma. They can also be used in the diagnosis and  
CC screening of such carcinomas.

XX The present invention describes antigenic peptides (I) comprising: (a)  
any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino  
acids. Also described: (1) an assay for the detection of a particular G  
protein-coupled receptor (GPCR) or a candidate polypeptide in a sample;  
and (2) an isolated antibody having high specificity and high affinity or  
avidity for a particular GPCR. (I) can be used as GPCR modulators and in  
gene therapy. The antigenic peptides for GPCRs are useful in detecting an  
antibody against a particular GPCR, and in the production of specific  
antibodies. The peptides and antibodies are also useful for detecting the  
presence or absence of corresponding GPCRs. The antigenic peptides for  
GPCRs and antibodies are useful for diagnosing and designing drugs for  
treating immune-related diseases, growth-related diseases, cell  
regeneration-related disease, immunological-related cell proliferative  
diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease,  
atherosclerosis, bacterial, fungal, protozoan or viral infections,  
osteoarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute  
inflammation, allergies, Crohn's disease, diabetes, graft versus host  
disease, Parkinson's disease, multiple sclerosis, pain, psoriasis,  
anxiety, depression, schizophrenia, dementia, mental retardation, memory  
loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension,  
hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or  
any other disorder in which GPCRs are involved. The antibodies may be  
used in immunoassays and immunodiagnosis. ABZ42523 to ABZ42869 encode  
GPCR proteins given in ABP81675 to ABP82018, which are used in the  
exemplification of the present invention

XX New genes that are up-regulated or down-regulated in cancers, useful as  
markers for diagnosing e.g. cancer, ischemia or heart diseases, or as  
therapeutic targets for screening drugs for treating these diseases.  
XX Claim 8; Page 643-644; 767pp; English.  
XX The present invention describes an isolated nucleic acid molecule, which  
comprises the sequence of any of the genes that are up-regulated or down-  
regulated in specific cancers (e.g. about 1031 genes up-regulated in  
acute lymphocytic leukemia). ACC72641 to ACC72860 represent cancer  
related gene nucleotide sequences which encode the proteins given in  
ABR58521 to ABR58709. Also described: (1) determining the presence or  
absence of a pathological cell in a patient; (2) an expression vector  
comprising a nucleic acid molecule described above; (3) a host cell  
comprising the vector; (4) an isolated polypeptide, which is encoded by  
the nucleic acid; (5) an antibody that specifically binds the polypeptide  
of (4); (6) specifically targeting a compound to a pathological cell in a  
patient by administering to the patient the antibody above; and (7) a  
drug screening assay. The nucleic acid is useful as diagnostic markers or  
therapeutic targets. In particular, the nucleic acid is useful for  
diagnosing a pathology, e.g. cancer (e.g. cancer of the bone marrow,  
bladder, brain, breast, cervix, colon/rectum, kidney, lung, ovary,  
pancreas, prostate, skin and uterus), wounds, ischaemia, heart diseases,  
atherosclerosis and endometriosis. The nucleic acid is also useful in  
drug screening, particularly for identifying agents for treating these

XX Determining the presence or absence of a pathological cell in a patient,  
FT useful for diagnosing, prognosing or treating cancer, comprises detecting  
FT a nucleic acid in a biological sample.  
XX  
XX Claim 8; SEQ ID NO 619; 1385pp; English.  
XX  
XX The invention relates to nucleic acids and proteins (ADN38683-ADN40064)

CC whose expression is upregulated or downregulated in specific cancers or  
CC other diseases such as angiogenic or fibrotic disorders, and to methods  
CC of determining the presence or absence of a pathological cell in a  
CC patient by detecting a nucleic acid at least 80% identical to those of  
CC the invention or by detecting a polypeptide of the invention. The  
CC invention also relates to expression vectors and host cells comprising a  
CC nucleic acid of the invention; antibodies which specifically bind a  
CC polypeptide of the invention; use of such antibodies for drug targeting;  
CC and methods of screening for modulators of activity or expression of the  
CC polypeptides and nucleic acids. The nucleic acids, polypeptides,  
CC antibodies and methods are useful for diagnosing, prognosing and treating  
CC cancer and other conditions such as psoriasis, ischaemia, heart disease,  
CC atherosclerosis, inflammatory diseases, autoimmune diseases, retinal  
CC neovascularisation syndromes, scarring and uterine fibroids. They may  
CC also be useful in wound healing and in contraception. The present  
CC sequence represents a nucleic acid sequence of the invention.

FT receptor, RAI3, useful for preventing, treating or ameliorating chronic obstructive
FT pulmonary disease (COPD), COPD-like disorder, or the underlying symptoms
FT of COPD.
XX
XX Claim 21; SEQ ID NO 18; 301pp; English.
PS
XX
XX The present sequence is that of cDNA encoding a human G-protein coupled
CC receptor (Class C, Group 5), denoted retinoic acid induced 3 (RAI-3).
CC Proteomics methods were used to isolate cigarette smoke-inducible
CC tyrosine phosphorylated proteins from airway epithelial cells. RAI-3 was
CC identified as being tyrosine phosphorylated and/or as being
CC associated/complexed with tyrosine phosphorylated proteins only in those
CC cells that had been exposed to cigarette smoke. Since RAI-3 is primarily
CC expressed in lung tissue, and since cigarette smoke is a major causative
CC factor of chronic obstructive pulmonary disease (COPD), RAI-3 provides a
CC novel cellular target for identifying modulators, e.g. agonists or
CC antagonists, useful for the treatment and/or prevention of COPD and
CC related disorders such as emphysema and chronic bronchitis. RAI-3
CC modulators, e.g. agonists and antagonists, especially antisense
CC compounds, can be used to treat COPD and/or its associated and diseases
CC signaling molecules. Single nucleotide polymorphisms (SNPs) detected in
CC the RAI-3 gene are useful for determining COPD association in
CC individuals. RAI-3 nucleic acid molecules and polypeptides are useful for
CC preventing, treating or ameliorating disorders related to aberrant GPCR
CC signaling or cell cycle regulation, pulmonary disorders, inflammatory
CC lung disorders, COPD, the underlying symptoms of COPD, COPD-related
CC disorders or conditions, autoimmune disorders, disorders related to
CC hyperimmune activity, inflammatory conditions, disorders related to
CC aberrant acute phase responses, hypercongenital conditions, birth
CC defects, necrotic lesions, wounds, organ transplant rejection, renal
CC diseases, ischaemia-reperfusion injury, heart disorders, disorders
CC related to aberrant signal transduction, proliferation disorders,
CC cancers, HIV infection, asthma, cystic fibrosis, pulmonary fibrosis,
CC ulcerative colitis, cerebral infarct, myocardial infarct, diabetic
CC nephropathy, allergic rhinitis, Crohn's disease, atherosclerosis,
CC rheumatoid arthritis, inflammatory/autoimmune disorders, glioblastoma,
CC pulmonary small cell undifferentiated carcinoma, carcinoma of the breast,
```

```
CC colon, lung, ovary, pancreas, prostate, non-Hodgkin's lymphoma, disorders
CC associated with aberrant cell adhesion, I-CAM function and/or regulation,
CC E-selectin function and/or regulation, or aberrant NF-kB function and/or
CC regulation (all claimed).

PT prostate cancer or tumor.
XX
PS Claim 1; SEQ ID NO 3498; 7273pp; English.
XX
The invention relates to human tumour-associated antigenic target (TAT)
CC polypeptides, and their related nucleic acids. The TAT polypeptides are
CC overexpressed in cancer tissues compared to normal tissues, and may thus
CC serve as effective targets for the diagnosis and treatment of cancer in
CC mammals. The invention also relates to nucleic acid and polypeptide
CC sequences at least 80% identical to the TAT nucleic acids and
CC polypeptides; expression vectors and host cells comprising a TAT nucleic
CC acid; an antibody specific for a TAT polypeptide; a peptide or organic
CC molecule which binds to a TAT polypeptide; fusion proteins comprising a
CC TAT polypeptide; and methods and compositions for the treatment or
CC diagnosis of cancer in mammals. TAT polypeptides, nucleic acids,
CC antibodies, antagonists, binding molecules and compositions are useful
CC for diagnosing or treating a cell proliferative disorder associated with
CC increased TAT expression, particularly cancers such as breast cancer,
CC colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder
CC cancer, pancreatic cancer, cervical cancer, cancers of the central
CC nervous system, melanoma and leukaemia. TAT nucleic acids may further be
CC used as hybridisation probes, in chromosome and gene mapping, in
CC chromosome identification and in gene therapy. The present sequence
CC represents a TAT nucleic acid of the invention

Diagnosing and treating a cancer, e.g. breast, lung, colon, or kidney
PT cancer, comprises detecting and blocking the over expression of a gene of
PT a protein found in breast, lung, colon, or kidney tissue.
XX
PS Claim 2; SEQ ID NO 2; 220pp; English.
XX
The present invention describes a method for diagnosing and treating a
CC cancer, e.g. breast, lung, colon, or kidney cancer. The method comprises
CC detecting and blocking the over expression of a gene of a protein found
CC in breast, lung, colon, or kidney tissue. Also described is an antibody
CC or binding portion of an antibody that specifically binds a protein found
CC in breast tissue, lung tissue, colon tissue, or kidney tissue. The
CC antibody has cytostatic activity, and can be used in gene therapy. The
CC methods, antibodies, polynucleotides and polypeptides from the present
CC invention are useful for detecting, diagnosing, preventing and treating
CC cancer, e.g. breast, lung, colon, or kidney cancer. The present sequence
CC represents a nucleotide sequence given in the present invention, which is
CC over expressed in human breast tumour tissue. N.B. All 385 sequences
CC referenced in this patent are detailed in the US provisional application
CC SN 60/447,900, filed 02/13/2003. In this application only one sequence,
CC representing the longest sequence of each of the 65 clones is listed in
CC Appendix A (and given as SEQ ID NO:1 to 65 in the Sequence Listing).

XX      New nucleic acid, and derived proteins, useful for diagnosis of bronchial
PT      cancer and in screening for therapeutic and diagnostic agents.
XX
XX      Claim 1; SEQ ID NO 350; 1381pp; German.
PS
XX
XX      This invention relates to a novel isolated nucleic acid associated with
CC      bronchial cancer comprising 489 defined sequences given in the
CC      specification. The invention may be useful for the production of
CC      compounds with a cytostatic activity through the inhibition of expression
CC      or activity of tumour-associated proteins. The novel DNA sequences and
CC      the proteins/peptides encoded by them are used for detecting bronchial
CC      cancer or determining the risk of developing it and to screen for
CC      specific binding partners of the DNA or protein sequences, where the
CC      binding partners are potentially useful as agents for treating or
CC      diagnosing bronchial cancer. The DNA or protein sequences can also be
CC      used for prognosis, detection of metastases and for secondary treatment
CC      (of tumours that have been stabilised or are no longer detectable).
CC      Detecting abnormal expression of the DNA sequences provides early
CC      diagnosis of bronchial cancers. The present sequence is that of a novel
CC      bronchial cancer-associated human gene sequence of the invention.

XX
XX      Novel isolated antibody capable of binding to tumor-associated antigenic
PT      target polypeptide, useful for treating cell proliferative disorder e.g.
XX      cancer.
PS      Claim 1; SEQ ID NO 40; 337pp; English.
XX
XX      The invention relates to a novel isolated antibody binding to a
CC      polypeptide having at least 80% sequence identity to a polypeptide having
CC      any one of 76 fully defined 182-910 amino acid tumor-associated antigenic
CC      target polypeptide (TAT) sequences (AEA00127-AEA00202) given in the
CC      specification, a polypeptide having any one of (AEA00127-AEA00202), a
CC      lacking its associated signal peptide, or an extracellular domain of a
CC      polypeptide having any one of (AEA00127-AEA00202). The polypeptide is
CC      encoded by the nucleotide sequence having any one of (AEA00049-AEA00126).
CC      An antibody of the invention has cytostatic activity. The antibody is
CC      useful for inhibiting growth of a cell expressing TAT188, which involves
CC      contacting the cell with the antibody. The cell is a cancer cell chosen
CC      from breast, colon, rectum, endometrium, kidney, lung, ovary, skin and
CC      liver cell. The cancer cell is a mammalian cell, preferably a human cell.
CC      The antibody is also useful for detecting the level of TAT188
CC      polypeptide expressed in a test cell relative to a control cell, and for
CC      detecting the level of TAT188 polypeptide or a polypeptide having at
CC      least 80 % sequence identity to the TAT188 polypeptide sequence in a test
CC      cell relative to a control cell. The antibody is useful for treating a
CC      preventing a cell proliferative disorder associated with increased
CC      expression or activity of a polypeptide having at least 80 % identity to
CC      a TAT188 polypeptide sequence. The cell proliferative disorder is cancer.
CC      The method of the invention is useful for inhibiting the growth of a
CC      cancer cell. The present sequence encodes a polypeptide of the invention.

PT Novel isolated antibody e.g. anti-E16 or anti-TAT112 antibody that binds
PT to tumor-associated antigenic target polypeptide, useful for diagnosing
PT or treating cancer.
XX
PS Claim 1; SEQ ID NO 40; 96pp; English.
XX
XX This invention relates to a novel isolated antibody, for example anti-E16
XX or anti-TAT112 antibody, that binds to a tumor-associated antigenic
XX target polypeptide (TAT) and that lacks an associated signal peptide
XX sequence. The invention may be useful for the development of compounds
XX with a cytostatic activity acting as antagonists of the TAT188
XX polypeptide or RNA interference whilst the disclosed sequences may be
XX useful for gene therapy. The invention is useful for inducing the death
XX of a cell (such as a cancer cell chosen from breast, colon, rectum,
XX endometrium, kidney, lung, ovary, skin and liver) to which it binds,
XX inhibiting proliferation or promoting cell death of a cell expressing
XX TAT188. In addition, the invention may be useful for detecting the level
XX of TAT188 polypeptide in a test cell relative to a control cell, or
XX treating or preventing a cell proliferative disorder associated with
XX increased expression of TAT188. The novel antibody of the invention is
XX useful for inhibiting the growth of a cancer cell and may be useful for
XX diagnosing or treating cancer. The present sequence is that of the human
XX TAT115 cDNA which encodes a protein against which an antibody of the
XX invention may be targeted.

PT Substance that suppresses expression of retinoic acid-inducible G-protein  
PT coupled receptor-3 RAI3 gene or nucleic acid, useful for suppressing cell  
PT growth, and as pharmaceutical or therapeutic agent of breast cancer.  
XX  
XX  
PS Claim 1; SEQ ID NO 2; 22pp; Japanese.  
XX  
CC The invention relates to a novel substance which suppresses the  
CC expression of a retinoic acid-inducible G-protein coupled receptor (RAI)3  
CC gene. The RAI3 gene suppressing agent is useful for suppressing cell  
CC growth, and as a pharmaceutical or therapeutic agent of breast cancer,  
CC and is also useful in identifying a cell growth inhibitory substance. The  
CC RAI3 gene suppressing agent enables the identification of a cell growth  
CC inhibitory substance. This polynucleotide sequence represents the  
CC retinoic acid-inducible G-protein coupled receptor 3 gene of the  
CC invention.

PT Isolated nucleic acid molecules encoding novel ovarian polypeptides,  
PT useful in the prevention, treatment and diagnosis of cancer (e.g. ovarian  
PT cancer), immune disorders, cardiovascular disorders and neurological  
PT diseases.  
XX  
PS Claim 1; SEQ ID NO 834; 2922pp; English.  
XX  
XX The invention relates to 2175 novel human ovarian antigens (ABP41054-

CC ABP43228) and to cDNAs encoding them (ABQ54131-ABQ56305), and also  
CC encompasses polypeptides 90% identical and polynucleotides 95% identical  
CC to the sequences of the invention. The invention additionally relates to  
CC recombinant vectors and host cells comprising human ovarian antigen  
CC polynucleotides, antibodies against human ovarian antigens, and the use  
CC of ovarian antigen polynucleotides and polypeptides in diagnosing,  
CC treating, prognosing or preventing various ovary and/or breast-related  
CC disorders. Such conditions include ovarian cancer and breast cancer, and  
CC metastatic tumours of ovarian or breast origin, reproductive system  
CC disorders (e.g., infertility, disorders of pregnancy, anovulation,  
CC polycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine  
CC disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic  
CC shock syndrome), inflammatory conditions (e.g., mastitis, oophoritis and  
CC vaginitis), immune disorders (e.g., congenital and acquired  
CC immunodeficiencies, autoimmune oophoritis, systemic lupus erythematosus),  
CC blood-related disorders (e.g., anaemia), cardiovascular disorders,  
CC respiratory disorders, neurological disorders, gastrointestinal disorders  
CC and urinary system disorders. Ovarian antigen polypeptides and  
CC polynucleotides may also be used in screening for compounds which  
CC modulate ovarian antigen expression or activity. The polynucleotides may  
CC further be used for gene therapy, chromosome mapping, in the  
CC identification of individuals and in forensic analysis, and the  
CC polypeptides may be used as food additives or to prepare antibodies  
CC useful in disease diagnosis, drug targeting and phenotyping. The present  
CC sequence represents cDNA encoding a human ovarian antigen of the  
CC invention. Note: The sequence data for this patent did not form part of  
CC the printed specification, but was obtained in electronic format directly  
CC from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

PT New isolated nucleic acid for diagnosing and treating cervical cancer and  
PT for assessing and detecting compounds for treating the cancer.  
XX  
PS Claim 1; Page 840; 1051pp; English.

CC The invention relates to novel genes (AAH68727-AAH73383) associated with  
CC cervical cancer with cytostatic activity. The nucleic acids and encoded  
CC polypeptides are useful: to assess if a patient is afflicted with  
CC cervical cancer or has a pre-malignant condition; to monitor the  
CC progression of cervical cancer or a premalignant condition in a patient;  
CC and to select and/or assess the efficacy of a compound or therapy for  
CC inhibiting cervical cancer in a patient. The nucleic acids may also be  
CC useful for gene therapy

XX cancer.

XX Disclosure; SEQ ID NO 10424; 36pp; English.

CC The invention relates to an isolated polypeptide (I) associated with  
CC breast cancer which is encoded by a nucleic acid molecule comprising a  
CC nucleotide sequence (S1). Further disclosed is an antibody that binds to  
CC the polypeptide of the invention. The activity of the polypeptide of the  
CC invention may be described as cytostatic. The antibody is useful for  
CC detecting the presence of (I) in a sample. Nucleic acid molecules of the  
CC invention are useful in the detection of breast tumours. (I) is useful as  
CC a marker for breast cancer and in breast cancer therapy. Sequences given  
CC in records ACN78851-ACN92934 represent nucleic acid markers associated  
CC with breast cancer. Note: The sequence listing does not form part of the  
CC specification but may be obtained in electronic format from the USPTO web  
CC site at [seqdata.uspto.gov/sequence.html?DocID=20030099974](http://seqdata.uspto.gov/sequence.html?DocID=20030099974)

XX New nucleic acid differentially expressed in pancreatic tumor tissue, for  
XX use as diagnostic agents and in screening for therapeutic agents.

XX Claim 1; SEQ ID NO 42; 28pp; German.

CC The invention relates to a novel human nucleic acid sequence of the  
CC pancreas and its encoded protein. The invention further comprises:  
CC proteins and peptides, preferably isolated, that contain a sequence  
CC encoded by the novel nucleic acid; and methods for diagnosis and  
CC treatment of pancreatic cancer, using a substance that inhibits or binds  
CC to the protein or its DNA, including: an antisense oligonucleotide, short  
CC interfering RNA or ribozyme directed against the pancreatic protein, an  
CC organic molecule, particularly having a molecular weight below 5000,  
CC especially 300, that binds to the pancreatic DNA, an aptamer or  
CC (monoclonal) antibody, preferably human or humanized, that binds to the  
CC pancreatic DNA, or an anti-idiotypic antibody raised against the  
CC monoclonal antibody, any of which may be derivatized with a reporter  
CC group, cytotoxic compound, immunostimulant and/or radioisotope. The novel  
CC human pancreatic proteins and their encoding DNA have cytostatic  
CC activity. The novel sequences are useful for inhibiting transcription  
CC and/or expression of genes and proteins associated with pancreatic  
CC cancer. This polynucleotide sequence represents the DNA encoding one of  
CC the novel human pancreatic proteins of the invention. Note: This sequence  
CC is not shown in the specification, it has been electronically downloaded  
CC from a DVD-ROM provided with this specification by the European Patent  
CC Office.

XX XX
PS Disclosure; SEQ ID NO 11321; 455pp; English.
XX CC
CC The invention relates to Pseudomonas aeruginosa polypeptides and the
CC polynucleotides encoding them. The sequences are useful in diagnosis and
CC therapy of pathological conditions, as molecular targets for diagnostics,
CC prophylaxis and treatment of pathological conditions resulting from a
CC bacterial infection, for evaluating a compound, such as a polypeptide,
CC for the ability to bind a P. aeruginosa nucleic acid, as components of
CC effective antibacterial targets, as targets for antibacterial drugs,
CC including anti-P. aeruginosa drugs, as templates for recombinant
CC production of P. aeruginosa-derived peptides or polypeptides, as target
CC components for diagnosis and/or treatment of P. aeruginosa-caused
CC infection, and in detection of P. aeruginosa sequences or other sequences
CC of Pseudomonas species using biochip technology. Sequences ABD01397-
CC ABD17967 represent P. aeruginosa polynucleotides of the invention. Note:

XX New genomic sequences from Listeria species, useful for detection,
XX treatment and prevention of infection, also related polypeptides,
XX antibodies and modulators.
XX PS Claim 14; SEQ ID NO 3404; 180pp; French.
XX CC
CC The present invention relates to nucleic acid sequences (ABQ67188-
CC ABQ71212) from Listeria sp. The sequences are useful as probes and
CC primers for identification and/or detection of Listeria (e.g. as
CC contaminants in foods, or mutational analysis) and for analysis of gene
CC expression. Proteins encoded by the nucleic acid sequences can be used to
CC screen for compounds that modulate gene expression, replication and
CC pathogenicity of Listeria (potential therapeutic agents), also for
CC treating infections by Listeria, and are useful as immunogens in anti-
CC Listeria vaccines. Note: The sequence data for this patent did not form
CC part of the printed specification, but was obtained in electronic format
CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. (Updated

 PT New serine protease (isolated from a member of the Micrococccineae) useful  
 PT in e.g. cleaning composition and animal feed composition.  
 XX  
 PS Claim 53; SEQ ID NO 2; 333pp; English.  
 XX  
 CC The present invention relates to new isolated variant serine protease as  
 CC given in SEQ ID NO:8 (I), obtained from a member of the Micrococccineae.  
 CC Also claimed are compositions comprising an isolated serine protease  
 CC having immunological cross-reactivity with the serine proteases obtained  
 CC from a member of the Micrococccineae and particularly the protease  
 CC obtained from Cellulomonas 6984. The variant has improved stability as  
 CC compared to wild-type Cellulomonas 6984 protease. The protease is  
 CC obtained from Cellulomonas, Oerskovia, Cellulosimicrobium,  
 CC Xylanthacterium or Fromicromospora (preferably Cellulomonas 6984). The  
 CC variant serine protease comprises at least one substitution corresponding  
 CC to the amino acid positions in SEQ ID NO. 8, and where the variant  
 CC protease has better performance in at least one property of keratin  
 CC hydrolysis, thermostability, casein activity, LAS stability or cleaning,  
 CC as compared to wild-type Cellulomonas 6984 protease. The invention deals  
 CC with serine proteases, genetic material encoding the proteases,  
 CC proteolytic proteins obtained from Micrococccineae spp, variant proteins  
 CC developed from them, vectors comprising the DNA encoding the protease,  
 CC host cells transformed with the vector DNA and enzymes produced by the  
 CC host cells. (I) is useful in cleaning compositions and animal feed  
 CC compositions, and is useful in laundry and dish detergents. It is useful  
 CC in textile and leather processing compositions. The isolated  
 CC polynucleotide of (I) provides the capability of isolating further  
 CC polynucleotides, which encode proteins having serine protease activity.  
 CC The enzyme compositions have comparable or improved wash performance, as  
 CC compared to presently used subtilisin proteases. The present sequence is  
 CC DNA encoding the signal peptide that is operatively linked to the  
 CC precursor protease of serine protease, SEQ ID NO:2.

XX
XX Early detection of soft tissue sarcoma comprises determining expression
PT of a gene in a first soft tissue sample and a normal soft tissue sample
PT and comparing the gene expression, also useful in treating soft tissue
PT sarcoma.
XX
XX Example 2; SEQ ID NO 7430; 210pp; English.
XX
XX The invention relates to a novel method for detecting soft tissue sarcoma
CC which comprises obtaining a first soft tissue sample from an individual
CC and a normal soft tissue sample from the same or different individual,
CC determining the expression of a gene in both samples and comparing the
CC expression of the gene in both soft tissue samples, where a higher level
CC of protein expression in the first soft tissue sample indicates the
CC presence of soft tissue sarcoma. The method of the invention has
CC cytosstatic applications and may be useful for detecting soft tissue
CC sarcoma, possibly via gene therapy or vaccine production. The nucleic
CC acid sequences may be useful in diagnostic and screening applications.
CC The current sequence is that of a human soft tissue sarcoma-upregulated
CC DNA of the invention. The current sequence is not shown within the
CC specification per se but was submitted in CD format by the inventor.

XX
XX This invention relates to novel, isolated full length human cDNA
CC molecules and the encoded proteins thereof. Specifically, it refers to
CC cDNA clones obtained by an oligo-capping method, where none of these
CC clones are identical to any known human mRNAs. The present invention
CC describes an immunoassay to identify agonists and antagonists, as well as
CC antibodies, antisense molecules and siRNAs that can all be used to bind
CC to and modulate expression of the cDNA molecules. As such, these
CC molecules are useful for diagnostic markers or therapeutic targets for
CC the various diseases or morbid states. In particular, they are useful in
CC gene therapy for treating osteoporosis, neurological disease, Alzheimer's
